## TACHYKININ RECEPTOR ANTAGONISTS

5           The present invention provides compounds of Formula (I), compositions thereof, and a method of antagonizing the NK-1 subtype of tachykinin receptor that comprises administering to a patient in need thereof an effective amount of a compound of Formula (I). In addition, the present invention relates to processes for preparing the compounds of Formula I and intermediates thereof.

10

## BACKGROUND OF THE INVENTION

Tachykinins are a family of peptides that are widely distributed in both the central and peripheral nervous systems. These peptides exert a number of biological effects  
15           through actions at tachykinin receptors. To date, three such receptors have been characterized, including the NK-1, NK-2, and NK-3 subtypes of tachykinin receptor.

          The role of the NK-1 receptor subtype in numerous disorders of the central nervous system and the periphery has been thoroughly demonstrated in the art. For instance, NK-1 receptors are believed to play a role in depression, anxiety, and central  
20           regulation of various autonomic, as well as cardiovascular and respiratory functions. NK-1 receptors in the spinal cord are believed to play a role in pain transmission, especially the pain associated with migraine and arthritis. In the periphery, NK-1 receptor activation has been implicated in numerous disorders, including various inflammatory disorders, asthma, and disorders of the gastrointestinal and genitourinary tract.

25           There is an increasingly wide recognition that selective NK-1 receptor antagonists would prove useful in the treatment of many diseases of the central nervous system and the periphery. While many of these disorders are being treated by new medicines, there are still many shortcomings associated with existing treatments. For example, the newest class of anti-depressants, selective serotonin reuptake inhibitors (SSRIs), are increasingly  
30           prescribed for the treatment of depression; however, SSRIs have numerous side effects, including nausea, insomnia, anxiety, and sexual dysfunction. This could significantly affect patient compliance rate. As another example, current treatments for chemotherapy-

-2-

induced nausea and emesis, such as the 5-HT<sub>3</sub> receptor antagonists, are ineffective in managing delayed emesis. The development of NK-1 receptor antagonists will therefore greatly enhance the ability to treat such disorders more effectively. Thus, the present invention provides a class of potent, non-peptide NK-1 receptor antagonists, compositions comprising these compounds, and methods of using the compounds.

### BRIEF SUMMARY OF THE INVENTION

The invention provides compounds of Formula (I):

(I)

wherein:

D<sup>1</sup> is a C<sub>1</sub>-C<sub>3</sub> alkane-diyl;

D<sup>2</sup> is CH or nitrogen;

D<sup>4</sup> is oxygen or sulfur;

R<sup>1</sup> is phenyl,

which is optionally substituted with one to three substituents independently selected from the group consisting of halo, C<sub>1</sub>-C<sub>4</sub> alkyl, C<sub>1</sub>-C<sub>4</sub> alkoxy, cyano, difluoromethyl, trifluoromethyl, and trifluoromethoxy;

R<sup>4</sup> is a radical selected from the group consisting of:

-3-

(IA)

and

(IB)

wherein

5

$A^1$ ,  $A^2$ ,  $A^3$ , and  $A^4$ , together with the atoms to which they are attached, form an unsaturated heterocyclic ring in which each of  $A^1$ ,  $A^2$ , and  $A^3$  is independently  $CR^7$ , nitrogen, which nitrogen is optionally substituted with  $R^8$ , oxygen, or sulfur, and  $A^4$  is carbon or nitrogen, wherein only one of  $A^1$ ,  $A^2$ , and  $A^3$  can be oxygen or sulfur;

10

$A^5$ ,  $A^6$ ,  $A^7$ , and  $A^8$ , together with the atoms to which they are attached, form an unsaturated carbocyclic or heterocyclic ring in which each of  $A^5$ ,  $A^6$ ,  $A^7$ , and  $A^8$  is independently  $CR^7$  or nitrogen, wherein at least one of  $A^5$ ,  $A^6$ ,  $A^7$ , and  $A^8$  must be  $CR^7$ ;

15

each  $R^7$  is independently selected from the group consisting of hydrogen, halo,  $C_1$ - $C_4$  alkyl, substituted  $C_1$ - $C_4$  alkyl,  $C_3$ - $C_6$  cycloalkyl,  $C_1$ - $C_4$  alkoxy, trifluoromethyl, trifluoromethoxy, and  $-NR^9R^{10}$ ;

20

$R^9$  and  $R^{10}$  are each independently hydrogen,  $C_1$ - $C_4$  alkyl, or  $-C(O)-CH_3$ , or  $R^9$  and  $R^{10}$ , together with the nitrogen to which they are attached, form a 4-7 membered saturated heterocyclic ring;

25

each  $R^8$  is independently selected from the group consisting of hydrogen,  $C_1$ - $C_4$  alkyl, substituted  $C_1$ - $C_4$  alkyl, and  $C_1$ - $C_3$  cycloalkyl;

$R^6$  is  $C_1$ - $C_4$  alkyl,  $C_3$ - $C_6$  cycloalkyl, phenyl, or pyridyl,

which phenyl or pyridyl is optionally substituted with one to three substituents independently selected from the group consisting of halo, cyano,  $C_1$ - $C_4$  alkyl,  $C_1$ - $C_4$  alkoxy, trifluoromethyl, trifluoromethoxy, and  $-NR^{11}R^{12}$ ;

30

-4-

$R^{11}$  and  $R^{12}$  are each independently hydrogen or  $C_1$ - $C_4$  alkyl, or  $R^{11}$  and  $R^{12}$ , together with the nitrogen to which they are attached, form a 4-7 membered saturated heterocyclic ring;

- 5  $R^5$  is hydrogen, halo, trifluoromethyl,  $C_1$ - $C_4$  alkyl,  $C_3$ - $C_6$  cycloalkyl, furyl, thienyl, pyrrolyl, imidazolyl,  $-NR^{13}R^{14}$ , pyridyloxy, phenyl, phenoxy, phenylthio, anilino,

which phenyl, phenoxy, phenylthio, or anilino group may be optionally substituted on the phenyl ring with one or two substituents independently selected from the  
 10 group consisting of halo,  $C_1$ - $C_4$  alkyl,  $C_1$ - $C_4$  alkoxy, and  $-S(O)_q(C_1$ - $C_4$  alkyl),

or a radical selected from the group consisting of:

15 wherein

W is a bond,  $CHR^{15}$ , O,  $NR^{15}$ , or  $S(O)_q$ ;

20 q is 0, 1, or 2;

$R^{15}$  is selected from the group consisting of hydrogen,  $C_1$ - $C_4$  alkyl, acetyl, carbamoyl, phenyl, benzyl, and  $-S(O)_2CH_3$ ;

25  $Z^1$ ,  $Z^2$ , and  $Z^3$  are each independently CH or nitrogen;

$R^{13}$  and  $R^{14}$  are each independently hydrogen or  $C_1$ - $C_4$  alkyl;

or a pharmaceutically acceptable salt thereof.

The compounds of Formula I are antagonists of tachykinin receptors. Specifically, the compounds of Formula I are antagonists of the NK-1 subtype of tachykinin receptor. Because these compounds inhibit the physiological effects associated with an excess of tachykinins, the compounds are useful in the treatment of numerous disorders related to tachykinin receptor activation. These disorders include: anxiety, depression, psychosis, and schizophrenia and other psychotic disorders; neurodegenerative disorders such as dementia, including senile dementia of the Alzheimer's type, Alzheimer's disease, AIDS-associated dementia, and Down's syndrome; seizure disorders, such as epilepsy; demyelinating diseases such as multiple sclerosis and amyotrophic lateral sclerosis and other neuropathological disorders, such as peripheral neuropathy, diabetic and chemotherapy-induced neuropathy, and post-herpetic and other neuralgias; acute and chronic obstructive airway diseases such as adult respiratory distress syndrome, bronchopneumonia, bronchospasm, chronic bronchitis, drivercough, and asthma; inflammatory diseases such as inflammatory bowel disease, psoriasis, fibrositis, osteoarthritis, and rheumatoid arthritis; disorders of the musculo-skeletal system, such as osteoporosis; allergies such as eczema and rhinitis; hypersensitivity disorders such as poison ivy; ophthalmic diseases such as conjunctivitis, vernal conjunctivitis, and the like; cutaneous diseases such as contact dermatitis, atopic dermatitis, urticaria, and other eczematoid dermatites; addiction disorders such as alcoholism; stress-related somatic disorders; reflex sympathetic dystrophy such as shoulder/hand syndrome; dysthymic disorders; adverse immunological reactions such as rejection of transplanted tissues and disorders related to immune enhancement or suppression such as systemic lupus erythematosus; gastrointestinal disorders or diseases associated with the neuronal control of viscera such as ulcerative colitis, Crohn's disease and irritable bowel syndrome; disorders of bladder function such as bladder detrusor hyper-reflexia and incontinence; atherosclerosis; fibrosis and collagen diseases such as scleroderma and eosinophilic fasciitis; irritative symptoms of benign prostatic hypertrophy; disorders associated with blood pressure, such as hypertension; or disorders of blood flow caused by vasodilation and vasospastic diseases, such as angina, migraine, and Reynaud's disease; emesis, including chemotherapy-induced nausea and emesis; and pain or nociception, for example, that attributable to or associated with any of the foregoing conditions.

-6-

In one embodiment, this invention provides a pharmaceutical composition comprising, as an active ingredient, a compound of Formula I, or a pharmaceutically acceptable salt thereof, in combination with one or more pharmaceutically acceptable carriers, diluents, or excipients.

5           In a further embodiment, the present invention relates to a method of making a compound represented by Formula I, and intermediates thereof.

In another embodiment, the present invention provides a method of selectively antagonizing an NK-1 receptor by contacting the receptor with a compound of Formula I, or a pharmaceutically acceptable salt thereof.

10           In another embodiment, this invention provides methods of treating a condition associated with an excess of tachykinins, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof. That is, the present invention provides for the use of a compound of Formula I, or a pharmaceutical composition thereof, for the treatment of a disorder associated with  
15 an excess of tachykinins.

In another aspect, the present invention provides for the use of a compound of Formula I, or a pharmaceutically acceptable salt thereof, in the manufacture of a medicament for antagonizing the NK-1 receptor. Thus, the present invention provides for the use of a compound of Formula I, or a pharmaceutically acceptable salt thereof, in the  
20 manufacture of a medicament for the treatment of a disorder associated with an excess of tachykinins by means of the method described above.

Of the disorders listed above, depression, anxiety, schizophrenia and other psychotic disorders, emesis, pain, asthma, inflammatory bowel disease, irritable bowel syndrome, and dermatitis are of importance. Of these disorders, depression and anxiety  
25 are of particular importance.

Thus, in a preferred embodiment, the present invention provides a method for treating major depressive disorder, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

30           In another preferred embodiment, the present invention provides a method for treating generalized anxiety disorder, comprising: administering to a patient in need

-7-

thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

In another preferred embodiment, the present invention provides a method for treating panic disorder, comprising: administering to a patient in need thereof an effective  
5 amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

In another preferred embodiment, the present invention provides a method for treating obsessive compulsive disorder, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

10 In another preferred embodiment, the present invention provides a method for treating social phobia, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

In another preferred embodiment, the present invention provides a method for treating irritable bowel syndrome, comprising: administering to a patient in need thereof  
15 an effective amount of a compound of Formula I, or a pharmaceutically acceptable salt thereof.

In another preferred embodiment, the present invention provides a method for treating inflammatory bowel disease, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I, or a pharmaceutically acceptable  
20 salt thereof.

In another preferred embodiment, the present invention provides a method for treating emesis (chemotherapy-induced nausea and acute or delayed emesis), comprising: administering to a patient in need thereof an effective amount of a compound of Formula  
25 I, or a pharmaceutically acceptable salt thereof.

## DETAILED DESCRIPTION OF THE INVENTION

The terms and abbreviations used in the preparations and examples have their normal meanings unless otherwise designated. For example "°C" refers to degrees  
30 Celsius; "N" refers to normal or normality; "mol" refers to mole or moles; "h" refers to hour(s); "eq" refers to equivalent; "g" refers to gram or grams; "L" refers to liter or liters; "M" refers to molar or molarity; "brine" refers to a saturated aqueous sodium chloride

-8-

solution; "J" refers to hertz; "ES" refers to electrospray; "MS" refers to mass spectrometry; "NMR" refers to nuclear magnetic resonance spectroscopy; "TLC" refers to thin layer chromatography; "ACN" refers to acetonitrile; "DMF" refers to N,N-dimethylformamide; "DMSO" refers to dimethylsulfoxide; "Et<sub>2</sub>O" refers to diethyl ether; "EtOAc" refers to ethyl acetate; "MeOH" refers to methanol; "EtOH" refers to ethanol; "iPrOH" refers to isopropanol; "TEA" refers to triethylamine; "TFA" refers to trifluoroacetic acid; "THF" refers to tetrahydrofuran.

As used herein, the term "C<sub>1</sub>-C<sub>4</sub> alkyl" refers to straight or branched, monovalent, saturated aliphatic chains of 1 to 4 carbon atoms and includes, but is not limited to, methyl, ethyl, propyl, isopropyl, butyl, isobutyl, *sec*-butyl, and *tert*-butyl. The terms "C<sub>1</sub>-C<sub>3</sub> alkyl" and "C<sub>1</sub>-C<sub>2</sub> alkyl" are encompassed within the definition of "C<sub>1</sub>-C<sub>4</sub> alkyl."

The term "substituted C<sub>1</sub>-C<sub>4</sub> alkyl" refers to a straight or branched, monovalent, saturated aliphatic chain of 1 to 4 carbon atoms, as encompassed in the definition of C<sub>1</sub>-C<sub>4</sub> alkyl above, that is further substituted on any of the carbon atoms with one to three substituents independently selected from the group consisting of hydroxy, oxo, halo, C<sub>1</sub>-C<sub>4</sub> alkoxy, =N(OH), and -NR<sup>a</sup>R<sup>b</sup>, wherein R<sup>a</sup> is H or C<sub>1</sub>-C<sub>4</sub> alkyl, R<sup>b</sup> is H, C<sub>1</sub>-C<sub>4</sub> alkyl, or -C(O)-CH<sub>3</sub>, or R<sup>a</sup> and R<sup>b</sup>, together with the N to which they are attached, form a 4-7 membered saturated heterocyclic ring. Examples of such 4-7 membered saturated heterocyclic rings include, but are not limited to, pyrrolidiny, piperidino, and morpholino.

"C<sub>1</sub>-C<sub>4</sub> alkane-diyl" refers to a straight or branched, divalent, saturated aliphatic chain of 1 to 4 carbon atoms and includes, but is not limited to, methylene, ethylene, ethane-1,1-diyl, propane-1,1-diyl, propane-1,2-diyl, propane-1,3-diyl, propane-2,2-diyl, and butane-1,4-diyl. The terms "C<sub>1</sub>-C<sub>2</sub> alkane-diyl" and "C<sub>1</sub>-C<sub>3</sub> alkane-diyl" are encompassed within the definition of "C<sub>1</sub>-C<sub>4</sub> alkane-diyl."

"C<sub>1</sub>-C<sub>4</sub> alkoxy" represents a C<sub>1</sub>-C<sub>4</sub> alkyl group, as defined above, linked to the parent molecule through an oxygen atom. Typical C<sub>1</sub>-C<sub>4</sub> alkoxy groups include methoxy, ethoxy, propoxy, isopropoxy, butoxy, *sec*-butoxy, *tert*-butoxy, and the like. The term "C<sub>1</sub>-C<sub>4</sub> alkoxy" includes within its definition the term "C<sub>1</sub>-C<sub>3</sub> alkoxy" and "C<sub>1</sub>-C<sub>2</sub> alkoxy."

"C<sub>3</sub>-C<sub>6</sub> cycloalkyl" represents a saturated hydrocarbon ring structure containing from three to six carbon atoms. Typical C<sub>3</sub>-C<sub>6</sub> cycloalkyl groups include cyclopropyl, cyclopentyl, cyclohexyl, and the like.

-9-

"Halo," "halogen," and "halide" represent a chloro, fluoro, bromo or iodo atom. Preferred halogens include chloro and fluoro.

"C<sub>1</sub>-C<sub>4</sub> alkoxy carbonyl" represents a straight or branched C<sub>1</sub>-C<sub>4</sub> alkoxy chain, as defined above, that is attached via the oxygen atom of the alkoxy to a carbonyl moiety.

5 Typical C<sub>1</sub>-C<sub>4</sub> alkoxy carbonyl groups include methoxycarbonyl, ethoxycarbonyl, propoxycarbonyl, isopropoxycarbonyl, butoxycarbonyl, *t*-butoxycarbonyl and the like.

The term "Pg" refers to an alcohol, carboxyl, or amino protecting group. Typical protecting groups include tetrahydropyranyl (THP), silanes such as trimethylsilane (TMS), *tert*-butyldimethylsilane (TBDMS), and *tert*-butyldiphenylsilane (TBDPS),  
10 methoxymethyl (MOM), benzyl (Bn), *p*-methoxybenzyl, formyl, acetyl (Ac), and *tert*-butoxycarbonyl (*t*-BOC). Typical carboxyl protecting groups may include methyl, ethyl, and *tert*-butyl. The selection and use of protecting groups is well known and appreciated in the art. See for example, Protecting Groups in Organic Synthesis, Theodora Greene (Wiley-Interscience); Protecting Groups, Philip J. Kocienski, Thieme Medical Publishers,  
15 inc: New York 1994, chapters 2,4,6.

It is understood that when R<sup>5</sup> or R<sup>6</sup> is pyridyl, the radical may be a pyridin-2-yl, pyridin-3-yl, or pyridin-4-yl. When R<sup>5</sup> is furyl or thienyl, the radical may be attached at the 2-, or 3-position of the radical. When R<sup>5</sup> is pyrrolyl or imidazolyl, the radical may be attached at the 1-, 2-, or 3 position of the pyrrolyl, or the 1, 2, or 4 position of the  
20 imidazolyl.

The skilled artisan will recognize that when R<sup>4</sup> is a radical of Formula (IA), and A<sup>1</sup>, A<sup>2</sup>, or A<sup>3</sup> is nitrogen, the nitrogen may only be optionally substituted with R<sup>8</sup> when such substitution creates an uncharged heterocyclic ring.

The compounds of the present invention may exist as stereoisomers. The Cahn-  
25 Prelog-Ingold designations of (R)- and (S)- and the designations of L- and D- for stereochemistry relative to the isomers of glyceraldehyde are used herein to refer to specific isomers. The specific stereoisomers can be prepared by stereospecific synthesis or can be resolved and recovered by techniques known in the art, such as chromatography on chiral stationary phases, and fractional recrystallization of addition salts formed by  
30 reagents used for that purpose. Useful methods of resolving and recovering specific stereoisomers are known in the art and described in E.L. Eliel and S.H. Wilen, *Stereochemistry of Organic Compounds*, (Wiley-Interscience 1994), and J. Jacques, A.

-10-

Collet, and S.H. Wilen, *Enantiomers, Racemates, and Resolutions*, Wiley-Interscience (1981). It is understood that the present invention contemplates all enantiomers and mixtures of enantiomers, including racemates.

5 The skilled artisan will recognize that compounds of the present invention may exist as tautomers. It is understood that tautomeric forms of the compounds of Formula (I) are also encompassed in the present invention.

This invention includes the pharmaceutically acceptable salts of the compounds of Formula I. A compound of this invention can possess a sufficiently basic functional group, which can react with any of a number of inorganic and organic acids, to form a  
10 pharmaceutically acceptable salt.

The term "pharmaceutically-acceptable salt" as used herein, refers to a salt of a compound of the above Formula I. It should be recognized that the particular counterion forming a part of any salt of this invention is usually not of a critical nature, so long as the salt as a whole is pharmacologically acceptable and as long as the counterion does not  
15 contribute undesired qualities to the salt as a whole.

The compounds of Formula I and the intermediates described herein form pharmaceutically-acceptable acid addition salts with a wide variety of organic and inorganic acids and include the physiologically-acceptable salts which are often used in pharmaceutical chemistry. Such salts are also part of this invention. A pharmaceutically-  
20 acceptable acid addition salt is formed from a pharmaceutically-acceptable acid, as is well known in the art. Such salts include the pharmaceutically acceptable salts listed in Journal of Pharmaceutical Science, 66, 2-19 (1977), which are known to the skilled artisan. *See also*, *The Handbook of Pharmaceutical Salts; Properties, Selection, and Use*. P. H. Stahl and C. G. Wermuth (ED.s), Verlag, Zurich (Switzerland) 2002.

25 Typical inorganic acids used to form such salts include hydrochloric, hydrobromic, hydriodic, nitric, sulfuric, phosphoric, hypophosphoric, metaphosphoric, pyrophosphoric, and the like. Salts derived from organic acids, such as aliphatic mono and dicarboxylic acids, phenyl substituted alkanoic acids, hydroxyalkanoic and hydroxyalkandioic acids, aromatic acids, aliphatic and aromatic sulfonic acids, may also  
30 be used. Such pharmaceutically acceptable salts thus include acetate, phenylacetate, trifluoroacetate, acrylate, ascorbate, benzoate, chlorobenzoate, dinitrobenzoate, hydroxybenzoate, methoxybenzoate, methylbenzoate, o-acetoxybenzoate, naphthalene-2-

-11-

benzoate, bromide, isobutyrate, phenylbutyrate,  $\alpha$ -hydroxybutyrate, butyne-1,4-dicarboxylate, hexyne-1,4-dicarboxylate, caprate, caprylate, cinnamate, citrate, formate, fumarate, glycollate, heptanoate, hippurate, lactate, malate, maleate, hydroxymaleate, malonate, mandelate, mesylate, nicotinate, isonicotinate, nitrate, oxalate, phthalate, teraphthalate, propiolate, propionate, phenylpropionate, salicylate, sebacate, succinate, suberate, benzenesulfonate, p-bromobenzenesulfonate, chlorobenzenesulfonate, ethylsulfonate, 2-hydroxyethylsulfonate, methylsulfonate, naphthalene-1-sulfonate, naphthalene-2-sulfonate, naphthalene-1,5-sulfonate, p-toluenesulfonate, xylenesulfonate, tartarate, and the like.

As used herein, the term "patient" refers to a mammal that is afflicted with one or more disorders associated with excess tachykinins. Guinea pigs, dogs, cats, rats, mice, horses, cattle, sheep, and humans are examples of mammals within the scope of the meaning of the term. It will be understood that the most preferred patient is a human. It is also understood that this invention relates specifically to the inhibition of mammalian NK-1 receptors.

It is also recognized that one skilled in the art may affect the disorders by treating a patient presently afflicted with the disorders or by prophylactically treating a patient afflicted with the disorders with an effective amount of the compound of Formula I. Thus, the terms "treatment" and "treating" are intended to refer to all processes wherein there may be a slowing, interrupting, arresting, controlling, or stopping of the progression of the disorders described herein, and is intended to include prophylactic treatment of such disorders, but does not necessarily indicate a total elimination of all disorder symptoms.

As used herein, the term "effective amount" of a compound of Formula I refers to an amount that is effective in treating the disorders described herein.

As with any group of pharmaceutically active compounds, some groups are preferred in their end use application. Preferred embodiments of the present invention are discussed below.

Thus, when  $R^4$  is a radical of Formula (IA), preferred embodiments of the unsaturated heterocyclic rings of Formula (IA) include the following:

-12-

(IA-1)

(IA-2)

(IA-3)

(IA-4)

(IA-5)

(IA-6)

(IA-7)

(IA-8)

- (h)  $R^5$  is pyridin-4-yl.
- 5 (i)  $R^5$  is pyridin-3-yl.
- (j)  $R^5$  is pyrimidin-5-yl.
- (k)  $R^5$  is imidazolyl.
- (l)  $R^5$  is a radical of Formula (IC) in which W is O.
- (m)  $R^4$  is a radical of Formula (IA).
- 10 (n)  $A^1$  is  $CR^7$ ,  $A^2$  is nitrogen,  $A^3$  is oxygen, and  $A^4$  is carbon.
- (o)  $A^1$  is  $CR^7$ ,  $A^2$  is oxygen,  $A^3$  is nitrogen, and  $A^4$  is carbon.
- (p)  $A^1$  is oxygen,  $A^2$  is  $CR^7$ ,  $A^3$  is nitrogen, and  $A^4$  is carbon.
- (q)  $A^1$  is  $NR^8$ ,  $A^2$  is nitrogen,  $A^3$  is  $CR^7$ , and  $A^4$  is carbon.
- (r)  $R^4$  is a radical of Formula (IA-1).
- 15 (s)  $R^4$  is a radical of Formula (IA-2).
- (t)  $R^4$  is a radical of Formula (IA-4).
- (u)  $R^4$  is a radical of Formula (IA-9).
- (v)  $R^7$  is  $C_1$ - $C_4$  alkyl or substituted  $C_1$ - $C_4$  alkyl.
- (w)  $R^7$  is substituted  $C_1$ - $C_4$  alkyl in which the  $C_1$ - $C_4$  alkyl is substituted with
- 20 one hydroxy.
- (x)  $R^7$  is  $C_3$ - $C_6$  cycloalkyl.
- (y)  $R^6$  is phenyl, which is substituted with one substituent selected from the group consisting of halo, cyano,  $C_1$ - $C_4$  alkyl,  $C_1$ - $C_4$  alkoxy, trifluoromethyl, trifluoromethoxy, and  $-NR^{11}R^{12}$ .
- 25 (z)  $R^6$  is 2-chloro-phenyl.

Most preferred compounds of Formula I include: [1-(3,5-bis-trifluoromethylbenzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chlorophenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone (Example 269), [1-(3,5-bis-trifluoromethylbenzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-2-cyclopropyl-oxazol-5-yl]-methanone (Example 131), [1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone (Example 35), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-

-14-

[5-(2-chloro-phenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone (Example 39), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone (Example 38), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone (Example 28), [1-(3,5)-bis-trifluoromethyl-benzyl)-5-pyrimidin-5-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone (Example 29), [1-(3,5-bis-trifluoromethyl-benzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-methyl-isoxazol-4-yl]-methanone (Example 97), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-2-cyclopropyl-oxazol-5-yl]-methanone (Example 255), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-2-cyclopropyl-oxazol-5-yl]-methanone (Example 254), [1-(3,5-bis-trifluoromethyl-benzyl)-5-morpholin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-1-methyl-1H-pyrazol-5-yl]-methanone (Example 246), [1-(3,5-bis-trifluoromethyl-benzyl)-5-morpholin-4-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-hydroxymethyl-isoxazol-4-yl]-methanone (Example 106), [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-hydroxymethyl-isoxazol-4-yl]-methanone (Example 64).

### Schemes

20

The compounds disclosed herein can be made according to the following schemes. The schemes, preparations, and examples should in no way be understood to be limiting in any way as to how the compounds may be made.

The skilled artisan will appreciate that the introduction of certain substituents will create asymmetry in the compounds of Formula (I). The present invention contemplates all stereoisomers, enantiomers, and mixtures of enantiomers, including racemates and diastereomers. It is preferred that the compounds of the invention containing chiral centers are single enantiomers.

As the following schemes, preparations, and examples demonstrate, many of the compounds of the present invention are not only selective NK-1 receptor antagonists, but are also useful intermediates for the preparation of additional compounds of Formula (I). It will be recognized by one of skill in the art that the individual steps in the following

-15-

schemes may be varied to provide the compounds of Formula (I). The particular order of steps required to produce the compounds of Formula (I) is dependent upon the particular compound being synthesized, the starting compound, and the relative lability of the substituted moieties. Some substituents have been eliminated in the following schemes for the sake of clarity and are not intended to limit the teaching of the schemes in any way.

### Scheme 1

#### Route 1

In Scheme 1, Route 1, the triazole compounds of Formula (3a) are formed by reacting a beta keto ester of Formula (2), in which R<sup>x</sup> is C<sub>1</sub>-C<sub>4</sub> alkyl or benzyl, with an azide of Formula (1). Such ring formations are well known and appreciated in the art. See Savini et al., *Farmaco* (1994) 49(5): 363-370; Martini et al., *J. Pharm. Sci.* (1988) 77(11): 977-980; Sun et al., *Magn. Reson. Chem.* (1998) 36(6): 459-460; Settimo et al., *Farmaco Ed. Sci.* (1983) 38(10): 725-737; Olesen et al., *J. Heterocycl. Chem.* (1984) 21: 1603-1608; L'abbe et al., *Bull. Soc. Chim. Belg.* (1987) 96(10): 823-824; Julino et al., *J. Chem. Soc. Perkin Trans. 1* (1998) 10: 1677-1684; Mamedov et al., *Chem. Heterocycl. Compd. (Engl. Transl.)* (1993) 29(5): 607-611; Wender et al., *Tetrahedron Lett.* (1987) 28(49): 6125-6128; Freitas et al., *J. Heterocycl. Chem.* (1995) 32(2): 457-462; Cottrell et al., *J. Heterocycl. Chem.* (1991) 28(2): 301-304. The product of Formula (3) can be isolated and purified by techniques well known in the art, such as precipitation, filtration, extraction, evaporation, trituration, chromatography, or recrystallization.

25 Azides of Formula (1) are commercially available or can be synthesized from the corresponding halide or sulfonate ester derivatives by reaction with an azide source, such as NaN<sub>3</sub>, LiN<sub>3</sub>, or tetrabutyl ammonium azide (Bu<sub>4</sub>NN<sub>3</sub>), with NaN<sub>3</sub> being preferred, in a suitable solvent mixture such as DMSO and water. Alternatively, azides of Formula (1) may be prepared from the corresponding alcohol derivative by reaction with hydrazoic

-16-

acid, diphenylphosphoryl azide, or zinc azide, in the presence of triphenylphosphine and diethyl- or diisopropyl-azodicarboxylate, in a solvent such as THF or toluene. *See* Scriven, E., Turbull, K., "Azides: Their Preparation and Synthetic Uses", Chem Rev. 1988, 88, 351-368.

- 5           The skilled artisan will also appreciate that a malonate derivative of Formula (2), in which  $R^5$  is an oxygen-linked substituent such as a  $C_1$ - $C_4$  alkoxy, may be used in the reaction of step a, instead of a beta keto ester, to provide a triazole of Formula (3). The reaction of both malonates and beta keto esters with azides is well known and appreciated in the art. *See* Benetti, S.; Romagnoli, R.; De Risi, C.; Zanirato, Z "Mastering  $\beta$ -Keto  
10   Esters," Chem. Rev. 1995, 95, 1065-1114.

- When dialkylmalonates are chosen as the starting reagent,  $R^5$  in the resulting product of Formula (3a) is a hydroxyl group. The hydroxyl group may be readily converted to the corresponding halide. Examples of reagents for this reaction include  $PCl_5$ ,  $POCl_3$ ,  $PBr_3$ ,  $POBr_3$ , and thionyl chloride, with  $PCl_5$  as the preferred reagent. This  
15   type of transformation is well known and appreciated in the art. *See* Buckle, D. R.; Rockell, C. J. M. *J. Chem. Soc., Perkin I*, 1982, 627-630.

**Route 2**

- 20           In Route 2, compounds of Formula (5) may be prepared by exposing the free base or the hydrochloride salt of compounds of Formula (4), wherein  $R^5$  is  $-NH_2$ , to a combination of a suitable base and an appropriate alkylating agent in a suitable solvent. Preferred bases include, but are not limited to, sodium or potassium hydride, sodium or

-17-

potassium hexamethyldisilazide, or butyl lithium. Preferred alkylating agents include alkyl halides or alkyl sulfonate esters. Preferred solvents include DMF, DME, or THF. This transformation is well-known in the literature. (See for example: Kelly, J.L., *J. Heterocyclic Chem.*, 1995, 32, 1417.)

5           Compounds of Formula (5) may be dehydrated by treating the compound with tosyl chloride and pyridine to provide the nitrile containing compounds of Formula (6). This transformation is well known to one skilled in the art and may be performed using other dehydrating agents. For a list of alternate dehydrating conditions see: Larock, Comprehensive Organic Transformations 2<sup>nd</sup> ed., Wiley-VCH, New York, pp 1983-1985.

10           Compounds of Formula (6) in which R<sup>5</sup> is -NH<sub>2</sub> may be readily converted to other R<sup>5</sup> substituents of Formula (I) by reactions well known in the art. For examples, see Larock, Comprehensive Organic Transformations 2<sup>nd</sup> ed., Wiley-VCH, New York, pp 678-679; Gajewski and Beck, *J. Heterocyclic Chem.* (1987) 24: 243.

15           In step d, the nitrile functionality of compounds of Formula (6) is converted to an ester-containing compound of Formula (3b). This transformation may be accomplished by treating the nitrile with an acid, such as hydrochloric acid or sulfuric acid, in a solution of an alcohol, such as methanol or ethanol, and water. Such transformations are well known in the art. For alternate conditions see: Larock, Comprehensive Organic Transformations 2<sup>nd</sup> ed., Wiley-VCH, New York, pp 1986-1987.

20           Alternatively, compounds of Formula (3b) may be prepared by combining an amine of Formula (8) and a properly substituted bromo isocyanoacrylate of Formula (7), wherein R<sup>x</sup> is a C<sub>1</sub>-C<sub>4</sub> alkyl or benzyl, in the presence of a base, preferably triethylamine, and an appropriate solvent, preferably DMF. Compounds of Formula (7) may be prepared according to the literature. See: K. Nunami *et al*, *J. Org. Chem.* 1994, 59, 7635-7642.

-18-

## Route 3

- Step f depicts the reduction of the carboxylic acid ester of Formula (3), in which R<sup>x</sup> is C<sub>1</sub>-C<sub>4</sub> alkyl or benzyl, to give a substituted methanol of Formula (9). Such reduction steps are well known and appreciated in the art. See Larock, R. C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> Ed., copyright 1999, John Wiley & Sons, pp 1117-1120.

- In one variation of step f, the carboxylic acid ester of Formula (3) may be reduced by a suitable reducing agent, such as sodium borohydride, lithium aluminumhydride, lithium borohydride, or diisobutyl aluminumhydride, with sodium borohydride being the preferred reducing agent. Such reductions are generally carried out in a solvent, such as MeOH, EtOH, iPrOH, THF, toluene, methylene chloride, or mixtures thereof. The preferred solvent is absolute ethanol. The product can be isolated and purified by techniques described above.

- Oxidation of an alkyl-hydroxy group of Formula (9) to the corresponding aldehyde of Formula (10) is well known in the art. A representative example is shown in step g, in which the methanol of Formula (9) can be oxidized by reacting it with an appropriate oxidizing agent, such as manganese oxide. Other oxidizing agents include pyridine sulfurtrioxide complex, 1,1,1-triacetoxy-1,1-dihydro-1,2-benziodoxol-3(1H)-one (Dess-Martin reagent), pyridinium chlorochromate, pyridinium dichromate, and catalytic tetrapropylammonium perruthenate (TPAP) with N-methylmorpholine N-oxide (NMO) as a co-oxidant. The aldehydes of Formula (10) can be isolated by techniques described above.

-19-

Hydrolysis of the carboxyl esters of Formula (3) to give the corresponding carboxylic acids of Formula (11), as shown in step h, is a well-known reaction. See Larock, R. C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> Ed., copyright 1999, John Wiley & Sons, pp 1959-1968. For example, an appropriate ester of Formula (3) may be dissolved in a suitable solvent, such as methanol or dioxane and water, and treated with a suitable base, such as NaOH or LiOH, to give a compound of Formula (11).

The reaction of step i is well known to the skilled artisan. A carboxylic acid, such as that of Formula (11), is coupled with an appropriate amine, under peptide coupling conditions, to provide amines of Formula (12). Suitable peptide coupling reagents include *N,N'*-carbonyldiimidazole (CDI), *N,N'*-dicyclohexylcarbodiimide (DCC), 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride (EDC), and 1-(3-(1-pyrrolidinyl)propyl)-3-ethylcarbodiimide (PEPC). Suitable catalysts for the coupling reaction include *N,N*-[dimethyl]-4-aminopyridine (DMAP). Such coupling reactions are well known and appreciated in the art. See Larock, R. C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> Ed., copyright 1999, John Wiley & Sons, pp 1941-1949.

Alternatively, a compound of Formula (11) may be converted to an acid chloride derivative, preferably by reaction with oxalyl chloride and DMF, and used to acylate an amine to give a compound of Formula (12). Such acylation reactions are well known and appreciated in the art. See Larock, R. C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> Ed., copyright 1999, John Wiley & Sons, pp 1929-1930. The product can be isolated and purified by techniques described above.

One skilled in the art could also appreciate the formation of the amides of Formula (12) by a direct conversion of the carboxyl ester of Formula (3) by the use of a trialkyl-aluminum reagent with an appropriate amine or by use of a magnesium amide, as depicted in step j.

Compounds of Formula (12) can further undergo a reduction (shown in step k) by treatment with a suitable reducing agent, such as diisobutylaluminum hydride, lithium aluminum hydride or a borane-methyl sulfide complex to afford aldehydes of Formula (10). See Larock, R., *Comprehensive Organic Transformations*, 2<sup>nd</sup> ed. Wiley-VCH: New York, 1999, pp1269-1271.

-20-

Scheme 2

Alkyne-ketones of Formula (14) can be synthesized from the aldehydes of  
 5 Formula (10) or the *N*-methyl-*N*-methoxyamide derivatives of Formula (12).

Step l depicts the addition of an alkynyl anion to an aldehyde of Formula (10) or a  
*N*-methyl-*N*-methoxyamide of Formula (12). The alkynyl anion is generated by treating  
 the appropriate alkyne with a suitable base, such as methyl lithium, *n*-butyl lithium, *tert*-  
 butyl lithium, lithium diisopropylamine, or preferably methyl or ethyl magnesium  
 10 bromide. When the aldehydes of Formula (10) are used, the hydroxy intermediate,  
 Formula (13), can be oxidized to afford the ketone of Formula (14). Such reactions are  
 well known in the art. See Larock, R.C., *Comprehensive Organic Transformations*, 2<sup>nd</sup>  
*ed.*, Wiley-VCH: New York, 1999, pp 1234-1246. Alternatively, *N*-methyl-*N*-  
 methoxyamide derivatives of Formula (12) are reacted with a suitable alkynyl anion to  
 15 provide compounds of Formula (14) directly.

Step n depicts the addition of an ethynyl anion reagent, such as ethynyl  
 magnesium bromide, to an *N*-methyl-*N*-methoxyamide of Formula (12) to give the  
 vinyllogous amide of Formula (15).

-21-

Scheme 3

In step r, the compounds of Formula (21) are readily prepared by cross-coupling of  
 5 a stannyl-triazole of Formula (19) and an acid chloride of Formula (20). This is  
 accomplished by heating a mixture of acyl chloride and stannane, in roughly molar  
 equivalence, in the presence of  $PdCl_2(PPh_3)_2$  in degassed 1,4-dioxane at temperatures  
 ranging from RT to  $100^\circ C$ . Other suitable catalysts include  $Pd(OAc)_2$ ,  $Pd(PPh_3)_4$ , and  
 $Pd_2(dba)_3 \cdot CHCl_3$ . Alternative solvents include DMF, toluene, and THF. The compound  
 10 of Formula (21) is concentrated and purified by techniques known in the art and described  
 herein.

Stannyl triazoles of Formula (19) can be made from the reaction of an appropriate  
 azide of Formula (1) with an appropriate stannyl-acetylene of Formula (17). The reactants  
 are combined in a suitable solvent, such as benzene, chloroform, THF, or preferably  
 15 toluene, and heated until the reaction is complete. The compound of Formula (19) is  
 isolated and purified by techniques known in the art and described above.

The stannyl-acetylenes of Formula (17) are readily available from commercial  
 sources or can be prepared from compounds of Formula (16) or alternatively, from  
 compounds of Formula (18). A compound of Formula (16) may be dissolved in an  
 20 appropriate solvent, such as THF, followed by addition of bis(tributyl)tin oxide and an

-22-

appropriate desilylating agent, such as TBAF (tetrabutyl ammonium fluoride), or potassium trimethylsilanolate. Alternatively, the compound of Formula (17) is made by dissolving an alkyne in an appropriate solvent, such as ether or THF, at -15 to -10 °C. To this mixture is added nBuLi, followed by tributyltin chloride. The compound of Formula

5 (17) may be used directly or isolated and purified by techniques described above.

The formation of various stannyl acetylenes of Formula (17) is well known in the art. For example, see WO 00/51614; WO 00/01702; WO 98/46228; Lambert et al., *Journal of the Chemical Society, Perkin Transactions 2* (2001) 6: 964-974; Yamamoto et al., *J. Chem. Soc., Perkin Trans. I* (1991) 12: 3253-7; Zhou et al., *J. Chem. Soc., Perkin*

10 *Trans. I* (1991) 11: 2827-30; Warner et al., *J. Org. Chem.* (1994), 59(19): 5822-23; and Jacobi et al., *Journal of the American Chemical Society* (2000), 122(18): 4295-4303.

The silyl-acetylenes of Formula (16) are readily available from commercial sources. Alternatively, the skilled artisan will recognize that compounds of Formula (16) may be prepared by reacting an appropriate aryl halide compound with trimethylsilyl

15 acetylene to give the silyl-alkyne. The reaction proceeds in the presence of copper iodide and a palladium catalyst, such as dichlorobis(triphenyl-phosphine)palladium (II). Other suitable catalysts include Pd(Ph<sub>3</sub>)<sub>4</sub>, Pd<sub>2</sub>dba<sub>3</sub>•CHCl<sub>3</sub>, or Pd(OAc)<sub>2</sub>.

#### Scheme 4

##### Route 1

The skilled artisan will appreciate the cyclization of an alkyne of Formula (14) with a nitrile oxide to afford compounds of Formula (I), as represented here by Formula

25 such cyclizations, see Joule, J. A.; Mills, K., *Heterocyclic Chemistry*, 4<sup>th</sup> ed. Blackwell Science, Inc.:Malden, MA, 2000, pp 442-448; Hussein, Ahmed Q.; El-Abadelah, Mustafa

-23-

M.; Sabri, Wail S. Heterocycles from nitrile oxides I; *J. Heterocycl. Chem.* (1983), 20(2), 301-4.

For compounds of Formula (I) in which  $R^5$  is a halide, such as chloride, a substitution can be performed with an appropriate nucleophile such as, but not limited to, primary amines, secondary amines, alcohols or thiols to further encompass compounds of the present invention. See March, J., *Advanced Organic Chemistry*, 1985, John Wiley and Sons, Inc., pp 255-446.

Alternatively, [3+2] cyclization of a vinylogous amide of Formula (15) with a nitrile oxide under the above same cyclization conditions affords compounds of Formula (22), in which one of  $A^2$  and  $A^3$  is nitrogen, and the other is oxygen, and in which  $R^7$  is hydrogen.

-24-

## Route 2

As shown in Scheme 4, Route 2, cyclization of compounds of Formula (14) can proceed to yield compounds of Formula (23). R<sup>x</sup> represents a C<sub>1</sub>-C<sub>4</sub> alkane-diyl, unless otherwise specified. The skilled artisan will recognize that compounds of Formula (23), in which Pg is a hydroxyl protecting group such as THP or trimethylsilane, may be deprotected, as shown in step v, to give a compound of Formula (24), which is encompassed in the scope of Formula (I). For example, the compound of Formula (23) is dissolved in a suitable solvent, such as MeOH or EtOH, and treated with a suitable acid,

-25-

such as p-TsOH•H<sub>2</sub>O (para-toluene sulfonic acid) or CSA (camphor sulfonic acid). Alternatively, the alcohol may be liberated by treating with acetic acid in a mixture of THF and water. The product is isolated and purified as described previously, or can be used without purification.

5 Additional transformations known to the skilled artisan or described herein may be carried out to yield compounds of Formula (25-29), which are all encompassed in the invention of Formula (I).

As shown in step w, alcohol-containing compounds of Formula (24), in which R<sup>x</sup> is C<sub>1</sub>-C<sub>4</sub> alkane-diyl, may be oxidized to give aldehydes of Formula (25), wherein R<sup>x</sup> is a  
10 bond or C<sub>1</sub>-C<sub>3</sub> alkane-diyl. For example, the alcohol may be oxidized by reaction with a combination of DMSO, oxalyl chloride, and triethylamine in CH<sub>2</sub>Cl<sub>2</sub>. These and other oxidizing conditions are described in Larock, R.C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> ed., Wiley-VCH: New York, 1999, pp 1234-1246. The skilled  
15 artisan will appreciate that aldehydes of Formula (25) may also be produced from the corresponding acetal by treatment with aqueous acidic conditions.

As shown in step x, aldehydes of Formula (25) may undergo further transformation to yield a compound of Formula (26), in which R<sup>x</sup> is a bond or C<sub>1</sub>-C<sub>3</sub> alkane-diyl. The skilled artisan will appreciate that this transformation may yield morpholino-substituted alkyl groups in addition to the -NR<sup>m</sup>R<sup>n</sup> groups depicted in step q.  
20 The amine is added to a solution of carbaldehyde in a solvent such as THF, or preferably 1,2-dichloroethane, followed by addition of a suitable reducing agent, such as NaHB(OAc)<sub>3</sub> or NaBH<sub>3</sub>CN. The compound is isolated and purified using conditions well known to the skilled artisan and described above.

Alternatively, the compound of Formula (25) may undergo the reaction depicted in  
25 step y to provide di-fluoro substituted compounds of Formula (27), in which R<sup>x</sup> is a bond or C<sub>1</sub>-C<sub>3</sub> alkane-diyl. In this reaction, (diethylamino)sulfur trifluoride or [bis(2-methoxyethyl)-amino]sulfur trifluoride may be used as fluorinating agents. The fluorinating agent is added to dichloromethane, THF, or ether, and the reaction proceeds at temperatures ranging from RT to 50 °C, for 1 to 6 hours. The compound of Formula  
30 (27) is isolated and purified as described above.

As shown in step z, (diethylamino)sulfur trifluoride or [bis(2-methoxyethyl)-amino]sulfur trifluoride may be used as fluorinating agents to convert the alcohol of

-26-

Formula (24) to the compound of Formula (28). As in step y, dichloromethane, THF, or ether may be used as solvents, and the reaction proceeds at temperatures ranging from  $-78^{\circ}\text{C}$  to  $0^{\circ}\text{C}$ . The reaction is stirred briefly and then warmed to RT. After 0.5 to 24 hours, the product may be isolated and purified as described above.

- 5 For synthesis of amines of Formula (29), the reaction is carried out as shown in step aa. When  $\text{R}^x$  is  $-\text{CH}_2-$ , the methanol of Formula (24) is combined with diphenyl phosphoryl azide and 1,8-diazabicyclo[5.4.0]undec-7-ene in a suitable solvent, such as dichloromethane, ether, DMF, or preferably THF, and stirred overnight at temperatures ranging from RT to  $80^{\circ}\text{C}$ . When  $\text{R}^x$  is  $\text{C}_2$ - $\text{C}_4$  alkyl, the alcohol of Formula (24) is
- 10 converted to a suitable leaving group, such as chloro, bromo, or sulfonate ester, under standard conditions, which is displaced by an azide source, such as  $\text{NaN}_3$  or  $\text{LiN}_3$ . The crude product is dissolved in a solvent, such as THF, and triphenylphosphine is added with several drops of water. The reaction proceeds after stirring for several hours to overnight. The resulting amine of Formula (29) is purified by techniques well known to
- 15 the skilled artisan.

Scheme 5

- 20 In Scheme 5, a compound of Formula (14) may be combined with the appropriate azide of Formula (30) to give keto-triazole compounds of Formula (I), in which  $-\text{A}^1-\text{A}^2-\text{A}^3-$  is  $-\text{NR}^8-\text{N}=\text{N}-$  or  $-\text{N}=\text{N}-\text{NR}^8-$ . The azide of Formula (30) is prepared in a similar manner as the azides of Formula (1). The reaction is carried out essentially as described in Scheme 3, step p, above. The skilled artisan will appreciate that the  $\text{R}^8$  substituent may
- 25 undergo transformations similar to those described elsewhere to give alternatively-substituted compounds of Formula (I).

-27-

Scheme 6

- To synthesize the keto-pyrazole compounds of Formula (I), as shown in step bb,
- 5 Compound (14) is dissolved in a solvent, such as toluene, benzene, or preferably THF/ether. A suitable diazoalkyl reagent, preferably trimethylsilyl diazomethane, is added. The reaction proceeds at temperatures ranging from RT to 80 °C for 24 to 72 hours to provide a regioisomeric mixture of pyrazoles of Formula (I), in which -A<sup>1</sup>-A<sup>2</sup>-A<sup>3</sup>- is -NR<sup>8</sup>-N=CR<sup>7</sup>-, -N-NR<sup>8</sup>-CR<sup>7</sup>-, -CR<sup>7</sup>=N-NR<sup>8</sup>-, or -CR<sup>7</sup>-NR<sup>8</sup>-N-, wherein R<sup>7</sup> is hydrogen
- 10 or C<sub>1</sub>-C<sub>4</sub> alkyl, and R<sup>8</sup> is hydrogen. The mixture can be separated by methods well known to the skilled artisan.

- To synthesize the above compounds of Formula (I) in which R<sup>8</sup> is C<sub>1</sub>-C<sub>4</sub> alkyl, the desired pyrazole is dissolved in a solvent, such as ether, or preferably THF, and cooled under N<sub>2</sub>. Temperatures may range from -20 °C to RT, with 0 °C preferred. To the
- 15 mixture is added a base, such as *t*-BuLi, *sec*-BuLi, NaH, or preferably *n*-BuLi, with stirring for 1 hour, followed by addition of a suitable alkylating agent, such as an alkyl halide or alkyl sulfonate. Preferred alkylating agents include dimethylsulfate or iodomethane. The reaction is stirred overnight while warming to RT. The reaction is quenched with water and extracted with EtOAc. The desired product is isolated and
- 20 purified by techniques well known to the skilled artisan.

-28-

Scheme 7

- In Scheme 7, the formation of compounds of Formula (37), which are
- 5 encompassed in the description of Formula (I), are shown. Step cc is carried out by addition of a sodium carboxylate salt of the compound of Formula (31) to a solution of an alpha-halo acetophenone of Formula (32), in which X is halo, such as chloro or bromo. The reaction is carried out in a suitable solvent, such as DMF. The reaction proceeds at temperatures ranging from RT to 50 °C to yield the compound of Formula (33). The
- 10 desired compound is extracted, concentrated, and purified by methods well known to the skilled artisan.

Oxazoles of Formula (34) may be prepared by cyclization of compounds of Formula (33) with acetamide, as shown in step dd. The reaction is conveniently carried out in the presence of an acid such as  $\text{BF}_3 \cdot \text{OEt}_2$ . The mixture is warmed to 100-130 °C

-29-

for several hours, then cooled to RT. Extraction, concentration, and purification of the compound of Formula (34) is carried out by methods well known to the skilled artisan. The reaction may be carried out neat, or in a suitable solvent, such as toluene, diphenyl ether, or chlorobenzene. Formation of oxazoles is well known in the art. For example,  
5 see Pei *et al.*, *Synthesis* (1998) 1298-1304; Joule and Mills, "Heterocyclic Chemistry" (4<sup>th</sup> ed., 2000) Blackwell Science, Ltd: Malden, MA; Chapter 21.

As shown in step ee, compounds of Formula (35), in which R<sup>x</sup> is a halo such as bromo or iodo, can be prepared from compounds of Formula (34). Where R<sup>x</sup> is bromo, freshly recrystallized N-Bromo-Succinimide (NBS) and (PhCO)<sub>2</sub>O<sub>2</sub> are added to a  
10 solution of the compound of Formula (34) in CCl<sub>4</sub>. The skilled artisan will recognize that AIBN may be used as a radical initiator. Alternatively, iodination of the oxazole may be carried out with N-Iodo-Succinimide (NIS) to make a compound of Formula (35) in which R<sup>x</sup> is iodo.

In step ff, *t*-BuLi is added to a solution of the 5-bromo-oxazole of Formula (35), at  
15 -78 to -40 °C, in a suitable solvent, such as THF or ether. To this solution is added a solution of an aldehyde of Formula (10) in THF or ether. The reaction is stirred at this temperature, and then warmed to RT for 24 to 60 hours. The alcohol of Formula (36) is concentrated and purified by techniques well known in the art.

Alternatively, in step ff, if the Grignard reagent of Formula (35) is used, Mg  
20 turnings and a small crystal of iodine are added to a solution of the 5-bromo-oxazole of Formula (35) in a freshly distilled solvent, such as THF or ether. The mixture is stirred at reflux temperature, then cooled to RT. A solution of the aldehyde of Formula (10) in a suitable solvent, such as THF or ether, is added to the Grignard solution, and the solution is stirred for 1-4 hours. The alcohol of Formula (36) is extracted, concentrated, and  
25 purified by techniques well known in the art.

In step gg, the alcohol of Formula (36) may react in the presence of a suitable oxidizing agent, such as MnO<sub>2</sub>, to give the keto-oxazole of Formula (37). The reaction is conveniently carried out in a solvent such as CH<sub>2</sub>Cl<sub>2</sub>. Other solvents, such as diethyl ether or toluene, may be used, and the reaction may be carried out at RT or heated. The  
30 oxidation reaction of step gg may also be carried out by other procedures well known to the skilled artisan, such as Dess-Martin periodinane, Swern, or PDC.

-30-

Ketones of Formula (37) may also be prepared directly from oxazoles of Formula (35) by treatment with an activated amide of Formula (12). In this variant, the oxazole is converted to the organo-lithium or organomagnesium bromide reagent as described above (step ff) and a solution of the amide of Formula (12) in a suitable solvent, such as THF or ether, is added. The resulting mixture is stirred for 4-60 hours at RT. The product of Formula (37) is isolated and purified as described above.

Scheme 8

10

In Scheme 8, synthesis of compounds of Formula (40), which are encompassed in the description of Formula (I), is shown. The compound of Formula (38) undergoes a reaction similar to that shown in Scheme 7, to give the alcohol of Formula (39) or the keto-imidazole of Formula (40). The alcohol of Formula (39) may be oxidized to give the compound of Formula (40) by methods well known to the skilled artisan and described above.

15

-31-

Scheme 9

In Scheme 9, compounds of Formula (41), which are included in the invention of

5 Formula (I), may be prepared by dissolving the propynone of Formula (14) in chlorobenzene, followed by addition of alpha-pyrone. Additional pyrone is added to drive the reaction to completion. The reaction is carried out at 110-160 °C, preferably 130 °C, for 24 to 72 hours. The reaction may also be carried out with other solvents, such as

10

Scheme 10

In Scheme 10, the compound of Formula (42) undergoes successive oxidation reactions to give the compounds of Formula (43) and (44), as shown in step ii.

15 Thiomorpholino compounds of Formula (42) are synthesized by substitution of the corresponding halide, as recognized in the art and described elsewhere. The compound of Formula (44) may also be synthesized directly from compounds of Formula (42), as shown in step jj. Each of the compounds of Formula (42), (43), and (44) is encompassed

-32-

in the scope of compounds of Formula (I).

In step ii, aqueous hydrogen peroxide is added to a solution of the thiomorpholinyl substrate of Formula (42) in a suitable solvent such as EtOH, CH<sub>2</sub>Cl<sub>2</sub>, or preferably, MeOH. The reaction proceeds, with stirring, at 0 to 40 °C for 8 to 48 hours. The products of Formula (43) or (44) may be purified by methods well known to the skilled artisan and described above.

Alternatively, the compound of Formula (44) may be synthesized directly, as shown in step jj, by reaction with 3-chloroperoxybenzoic acid in dichloromethane. The reaction may also be carried out with MeOH or EtOH as the solvent. The reaction proceeds, with stirring, at 0 to 40 °C for 1 to 3 hours. The product is purified by techniques well known in the art.

Scheme 11

15

As shown in Scheme 11, compounds of Formula (I) in which D<sup>2</sup> is nitrogen can be synthesized by forming the triazole in the final step. The steps described here correspond to those for similar reactions described above. Compounds of Formula (45), in which R<sup>x</sup> is hydrogen or C<sub>1</sub>-C<sub>4</sub> alkoxy, are synthesized from the corresponding alkyne, as described previously.

20

In the synthesis of the triazole compounds of Formula (I), a compound of Formula (49) is reacted with the appropriate azide, as described elsewhere.

The alkynyl-ketones of Formula (49) can be synthesized essentially as described in Scheme 2. Briefly, in step l, an alkynyl anion is added to a compound of Formula (45) in

-33-

which  $R^x$  is hydrogen, or to an *N*-methyl-*N*-methoxyamide of Formula (47). The alkynyl anion is generated by treating the appropriate alkyne with a suitable base, such as methyl lithium, *n*-butyl lithium, *tert*-butyl lithium, lithium diisopropylamine, or preferably methyl or ethyl magnesium bromide. When aldehydes of Formula (45) are used, the hydroxy intermediate, Formula (48), can be oxidized to afford the ketone of Formula (49). Such reactions are well known in the art. See Larock, R.C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> ed., Wiley-VCH: New York, 1999, pp 1234-1246. Alternatively, *N*-methyl-*N*-methoxyamide derivatives of Formula (47) are reacted with a suitable alkynyl anion to provide compounds of Formula (49) directly.

The *N*-methyl-*N*-methoxyamide derivatives of Formula (47) are synthesized, as described herein, from compounds of Formula (45) in which  $R^x$  is  $C_1$ - $C_4$  alkoxy. See also, Larock, R. C., *Comprehensive Organic Transformations*, 2<sup>nd</sup> Ed., 1999, John Wiley & Sons, pp 1941-1949; 1959-1968.

# Scheme 12

Scheme 12 depicts the synthesis of compounds of Formula (54), which are used in the reaction of Scheme 13.

Alkynes of Formula (50) may be prepared from an aldehyde of Formula (10)

through reaction with a diazo alkyl phosphonate, such as (1-diazo-2-oxo-propyl)-

-34-

phosphonic acid dimethyl ester. The reaction is carried out in an appropriate solvent, such as MeOH or EtOH, and a base, such as  $K_2CO_3$ . As shown in step nn, the compound of Formula (51), in which X is  $-CH(OH)-$ , can be made from alkynes of Formula (50) by deprotonation with a suitable base, such as LDA, NaH, or BuLi, followed by treatment  
5 with an appropriate aldehyde. The alcohol of Formula (51) may be oxidized to give the corresponding methanone, in which X is  $-C(O)-$ , by techniques well known in the art and described above.

In step oo, the methanone compound of Formula (51) may be treated with a substituted nitroalkyl compound and an isocyanate, such as 1,4-phenyl-diisocyanate, in  
10 the presence of a suitable base such as triethylamine to give an isoxazole of Formula (52), in which  $R^x$  is  $C_1-C_2$  alkane-diyl.

The skilled artisan will recognize that the hydroxyl group of Formula (52) can be oxidized, as shown in step pp, to give compounds of Formula (53), wherein  $R^x$  is a bond or methylene. The alcohol can be oxidized by a number of different oxidizing reagents,  
15 for example, under Dess-Martin periodinane oxidizing conditions or using combination of DMSO and triethylamine with oxalyl chloride. Such oxidations are readily accomplished by methods well known in the art. (Larock, R.C., Comprehensive Organic Transformations, 2<sup>nd</sup> ed., Wiley-VCH: New York, 1999, pp 1234-1246). The product of the reaction can be isolated and purified using techniques well known in the art.

20 Alternatively, compounds of Formula (53) can be made by deprotection of the appropriate acetal. Such deprotections are readily accomplished by methods well known in the art. (Protecting Groups in Organic Synthesis, Theodora Greene (Wiley-Interscience)).

Compounds of Formula (54) can be synthesized by reacting the appropriate  
25 aldehyde-containing compound of Formula (53) with ammonium acetate or hydrazine under acidic conditions such as acetic acid. For example, when  $R^x$  is methylene in the compound of Formula (53), reaction with ammonium acetate provides compounds of Formula (54) in which  $A^7$  is  $CR^7$ . When  $R^x$  is a bond, reaction with hydrazine provides compounds of Formula (54) in which  $A^7$  is nitrogen.

-35-

Scheme 13

Scheme 13 shows the formation of compounds of Formula (I), in which R<sup>4</sup> is a radical of Formula (IB), through a reduction of compounds of Formula (54). Specifically, the bicyclic isoxazole is dissolved in a suitable solvent, such as acetonitrile. To the reaction, is added molybdenum hexacarbonyl and water. The skilled artisan will recognize that the solution may be heated for the reaction to proceed. The reduction reaction may optionally be carried out using H<sub>2</sub>/Pt-C in a pressure sealed vessel. The product of Formula (I) is purified by techniques well known in the art, such as silica gel chromatography or recrystallization. Such reactions have been described in the art. See Nitta et al., *J. Chem. Soc., Chem. Commun.* (1982) 877.

### PREPARATIONS

15

#### General Preparation A

Combine the appropriate alkyl halide (1 eq) and sodium azide (3 eq) in DMSO/water (10:1, ca. 10 mL/g NaN<sub>3</sub>) and stir for 2-12 h at RT. Non-benzylic alkyl halides may require heating to 50-80 °C to facilitate the reaction. When the reaction is complete, add water and extract with ether. Wash the organic layer with water (2x) and brine. Dry the organic layer (Na<sub>2</sub>SO<sub>4</sub>), filter, and concentrate under reduced pressure. Generally, the resulting azide may be used without further purification.

By the method of General Preparation A, the following compounds can be prepared and isolated.

Preparation 14

## (2-methoxy-5-trifluoromethoxy-phenyl)-methanol

- 5 Dissolve 2-methoxy-5-trifluoromethoxy-benzaldehyde (9.0 g, 40.9 mmol) in MeOH (100 mL) and treat with sodium borohydride (1.45 g, 38.3 mmol). Stir at RT for 1 h., then carefully quench with 1N HCl to pH 3. Concentrate, then extract the aqueous mixture with  $\text{CH}_2\text{Cl}_2$  (3 X 100 mL). Combine the organic phases and wash with saturated  $\text{NaHCO}_3$  (100 mL) and brine (100 mL). Dry the organic layer, then filter, and
- 10 concentrate. Purify the crude material by flash chromatography using a linear gradient of

-37-

100% hexanes to 40% EtOAc/hexanes to give (2-methoxy-5-trifluoromethoxy-phenyl)-methanol (6.86 g, 75%) as a colorless oil. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.19 (m, 1H), 7.10 (dd, 1H, *J* = 2.9, 8.8 Hz), 6.83 (d, 1H, *J* = 8.8 Hz), 4.66 (d, 2H, *J* = 6.4 Hz), 3.85 (s, 3H), 2.21 (t, 1H, *J* = 6.4 Hz).

### Preparation 15

#### 2-Azidomethyl-1-methoxy-4-trifluoromethoxy-benzene

Dissolve (2-methoxy-5-trifluoromethoxy-phenyl)-methanol (4.49 g, 20.2 mmol) in  
10 DMF (40 mL) and treat with thionyl chloride (1.65 g, 22.6 mmol). Stir at RT for 2 h, then  
treat with potassium carbonate (5.57 g, 40.3 mmol), sodium azide (2.35 g, 36.1 mmol),  
and DMSO (40 mL). Stir the resulting mixture at RT overnight, then pour into water (100  
mL) and extract with ether (3 X 100 mL). Combine the organic phases and wash with  
water (2 X 100 mL) and brine (100 mL). Dry the organic layer (MgSO<sub>4</sub>), filter, and  
15 concentrate to give the title compound (4.77 g, 96%) as a colorless oil that may be used  
without further purification. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.14 (m, 2H), 6.87 (m, 1H),  
4.34 (s, 2H), 3.85 (s, 3H).

### Preparation 16

#### 20 3-Oxo-3-pyrimidin-5-yl-propionic acid methyl ester

Add a 25 wt% solution of sodium methoxide in methanol (4.5 mL, 19.8 mmol) to  
toluene (40 mL) and heat to 85 °C under N<sub>2</sub>. Dissolve pyrimidine-5-carboxylic acid ethyl  
ester (2.0 g, 13.2 mmol) in EtOAc (2.1 mL) and add dropwise to the toluene solution.  
25 Heat the reaction mixture for 1 h, then add a suspension of sodium methoxide (715 mg,  
13.2 mmol) in EtOAc (15 mL) dropwise. Heat the reaction mixture at 85 °C overnight,  
then cool to RT and pour into a solution of glacial acetic acid (12 mL) and water (150  
mL). After stirring for 1 h at RT, extract with EtOAc (3 x 100 mL). Wash the organic  
phase with brine (200 mL), dry over sodium sulfate, filter, and concentrate under reduced  
30 pressure to give the title compound as a mixture of tautomers: <sup>1</sup>H NMR (300 MHz,  
CDCl<sub>3</sub>) enol form δ 12.43 (s, 1H), 9.26 (s, 1H), 9.10 (s, 2H), 5.76 (s, 1H), 3.86 (s, 3H);  
keto form δ 9.42 (s, 1H), 9.30 (s, 2H), 4.06 (s, 3H), 3.74 (s, 2H).

-38-

Preparation 17

## 3-Oxo-3-pyrazin-2-yl-propionic acid methyl ester

Dissolve NaOMe (1.5 eq) in toluene and heat to 90 °C. Add a solution of 2-  
5 pyrazine methylester (1.0 eq) and EtOAc (2.0 eq) in toluene dropwise and heat at 90 °C.  
After 20 h, concentrate the mixture *in vacuo*. Slurry in excess EtOAc and reflux 20 h.  
Cool to RT, then add water and extract with EtOAc. Dry (Na<sub>2</sub>SO<sub>4</sub>), filter and concentrate  
*in vacuo* to give the title compound. TLC R<sub>f</sub> = 0.58 (1:1 EtOAc/hexanes).

10

Preparation 181-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazole-4-carboxylic acid  
ethyl ester

Treat a solution of ethyl isonicotinoylacetate (2.52 g, 13.0 mmol) and 3,5-bis-  
15 trifluorobenzyl azide (3.54 g, 13.1 mmol) in DMSO (20 mL) with milled K<sub>2</sub>CO<sub>3</sub> (5.72 g,  
41.4 mmol). Warm the mixture to 40 °C and stir for 18 h, then dilute with H<sub>2</sub>O and treat  
with 1N HCl until mixture reaches pH 7. Extract the mixture with EtOAc (2 X 50 mL).  
Combine the organic phases and wash with H<sub>2</sub>O (2 X 50 mL) and brine (50 mL), then dry,  
filter, and concentrate organic layer. Triturate crude material with hexanes, then  
20 recrystallize solid from 40% EtOAc/hexanes to give the title compound (2.80 g, 48%).  
MS (EI<sup>+</sup>) 445.2 (M+H); <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>): δ 8.74 (dd, 2H, J = 1.5, 4.4 Hz),  
7.80 (s, 1H), 7.45 (s, 2H), 7.13 (dd, 2H, J = 2.0, 4.4 Hz), 5.56 (s, 2H), 4.27 (q, 2H, J = 7.3  
Hz), 1.28 (t, 3H, J = 7.3 Hz). Analytical (C<sub>19</sub>H<sub>14</sub>F<sub>6</sub>N<sub>4</sub>O<sub>2</sub>): Calculated C, 51.36; H, 3.18;  
N, 12.61. Found C, 51.35; H, 3.21; N, 12.52.

25 By a method analogous to Preparation 18, the following compounds may be  
prepared and isolated.

Preparation 31

1-(3,5-bis-trifluoromethyl-benzyl)-5-hydroxy-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester

- 5           Combine a solution of sodium ethoxide (5.5 mL, 21 wt% in ethanol) and diethyl malonate (2.50 mL, 16.5 mmol) in ethanol (26 mL) with a solution of 1-azidomethyl-3,5-bis-trifluoromethyl-benzene (4.40 g, 16.3 mmol) in ethanol (6 mL) and heat to 80 °C. After 7 h, cool to RT and concentrate the mixture *in vacuo*. Dissolve the viscous oil in H<sub>2</sub>O (20 mL) and add aqueous 1N HCl until the solution reaches pH 2-3. Collect the
- 10   white precipitate by filtration and dry under reduced pressure to give the title compound. MS (ES) 384.0 (M+H)<sup>+</sup>, MS (ES-) 382.1 (M-H); <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.05 (s, 1H), 7.92 (s, 2H), 5.41 (s, 2H), 4.15 (q, 2H, *J* = 7.3 Hz), 1.22 (t, 3H, *J* = 7.3 Hz).

Preparation 32

- 15    1-(3,5-bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester

- Combine PCl<sub>5</sub> (5.73 g, 27.5 mmol) with a solution of 1-(3,5-bis-trifluoromethyl-benzyl)-5-hydroxy-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester (5.30 g, 13.8 mmol) in
- 20   toluene (150 mL) and heat to 50 °C. After 2 h, cool to RT, concentrate solution and dissolve crude material in ether (100 mL). Wash the organic solution with saturated NaHCO<sub>3</sub> (2 x 100 mL) and brine (100 mL), dry, filter, and concentrate. Purify the crude material by passing through a short plug of silica gel using a linear gradient of 50% to 80% EtOAc/hexanes, then recrystallize from 1:1 diethyl ether:petroleum ether (150 mL).
- 25   MS (ES) 402.0 (M+H)<sup>+</sup>; <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.88 (s, 1H), 7.76 (s, 2H), 5.67 (s, 2H), 4.43 (q, 2H, *J* = 7.0 Hz), 1.40 (t, 3H, *J* = 7.0 Hz).

Preparation 33

1-(3,5-Dichloro-benzyl)-5-hydroxy-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester

30

          Combine diethylmalonate (1.91 g, 11.9 mmol), 3,5-dichlorobenzylazide (2.40 mL, 11.9 mmol), and potassium carbonate (4.94 g, 35.8 mmol) in DMSO (15 mL) and heat the

-41-

mixture 8 h at 50°C. Dilute the cooled mixture with water, adjust pH to 5-6 with aqueous HCl, and extract with CH<sub>2</sub>Cl<sub>2</sub>. Wash the combined extracts with water, dry over Na<sub>2</sub>SO<sub>4</sub>, filter, and concentrate *in vacuo*. Chromatography of the resulting residue over silica gel using a CH<sub>2</sub>Cl<sub>2</sub>/MeOH gradient yields 3.28 g of the title compound as an oil. MS(ES)

5 316.0, 318.0 (M+1)<sup>+</sup>.

#### Preparation 34

5-chloro-1-(3,5-dichloro-benzyl)-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester

10 Combine 1-(3,5-dichloro-benzyl)-5-hydroxy-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester (1 eq) with PCl<sub>5</sub> (2 eq) in toluene and heat at 40-50°C until reaction is complete. Concentrate the mixture, treat with aqueous NaHCO<sub>3</sub>, and extract with Et<sub>2</sub>O. Dry the combined extracts over Na<sub>2</sub>SO<sub>4</sub>, concentrate, and purify by chromatography on silica gel. MS (ES) 334.0, 336.0 (M+1)<sup>+</sup>.

#### General Preparation B

Add a solution of LiOH·H<sub>2</sub>O (10 eq) in water to a solution of the appropriate ester (1 eq) in dioxane and stir overnight. Acidify to a pH of 1-2 with 5N HCl solution and

20 collect the precipitate by filtration. Dry the material *in vacuo* to afford the desired product.

By the method of General Preparation B, the following compounds may be prepared.

Preparation 64

[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazole-4-yl]-methanol

- 5 Dissolve 1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazole-4-carboxylic acid methyl ester (10.0 g) in MeOH (110 mL). Add NaBH<sub>4</sub> (2.64 g, 3 eq) and warm to reflux overnight (70 °C). Cool to RT and slowly pour into a separatory funnel containing an equal volume of water; extract with CH<sub>2</sub>Cl<sub>2</sub>. Dry the organic layer, concentrate, and recrystallize from EtOAc/Hexanes to give 7.0 g (75%) of the title
- 10 compound. MS (ES) 403.2 (M+1); <sup>1</sup>H NMR: (400 MHz, CD<sub>3</sub>OD) δ: 8.65 (dd, J = 5.2, 1.6 Hz, 1H) 8.53-8.52 (m, 1H), 7.89 (s, 1H), 7.86-7.83 (m, 1H), 7.60 (s, 2H), 7.56-7.53 (m, 1H), 5.83 (s, 2H), 4.59 (s, 2H).

Preparation 65

- 15 1-(3,5-bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazole-4-carbaldehyde

- Add a solution of LiBH<sub>4</sub> (65 mL, 2M in THF) to a solution of 1-(3,5-bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester (15.0 g, 37.3 mmol) in THF (150 mL) at 0 °C. After addition is complete, stir solution at RT for 6
- 20 h, then cool again to 0 °C. Carefully quench with slow addition of 5N HCl (50 mL). Stir

-45-

at RT for 30 min., then neutralize with 5N NaOH. Dilute mixture with water (100 mL) and extract with EtOAc (2 X 50 mL). Combine the organic phases and wash with water (100 mL), and brine (100 mL) then dry, filter, and concentrate to give the alcohol, which can be used in the next reaction without further purification.

- 5 Add Dess-Martin periodinane (19.0 g, 44.8 mmol) to a 0 °C solution of the above alcohol in CH<sub>2</sub>Cl<sub>2</sub> (100 mL). Stir solution at 0 °C for 15 min., then at RT for 2 h. Add additional Dess-Martin periodinane (1.7 g, 4.0 mmol) and stir at RT for 1 h. Pour solution into cold 5N NaOH (70 mL) and extract with ether (3 X 150 mL). Combine the organic phases and wash with 1N NaOH (100 mL), water (100 mL), and brine (100 mL),  
 10 then dry, filter, and concentrate. Purify the crude material by flash chromatography to give the title compound. MS (ES) 358.1(M+H). <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 10.13 (s, 1H), 7.90 (s, 1H), 7.76 (s, 2H), 5.67 (s, 2H).

By a method similar to Preparation 65, the following compound may be prepared.

##### 1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazole-4-carbaldehyde

- Add sodium borohydride (1.70 g, 0.045 mol) to a solution of 1-(3,5-bis-trifluoromethylbenzyl)-5-phenyl-1H-[1,2,3]triazole-4-carboxylic acid ethyl ester (5.0 g, 0.011 mol) in EtOH (70 mL) and heat the mixture to reflux. After 2 h, cool to RT and  
 20 add the reaction mixture to 0.5 N HCl (200 mL) and methylene chloride (200 mL). Separate the layers and extract the aqueous layer with methylene chloride (50 mL). Dry the combined organic layers over MgSO<sub>4</sub>, filter, and concentrate to give [1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-methanol.

- 25 Dissolve the crude [1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-methanol (3.90 g, 0.0097 mol) in DMSO (30 mL) and add *N,N*-diisopropylethylamine (6.77 mL, 0.039 mol). To this solution add sulfur trioxide pyridine complex (3.09 g, 0.019 mol) in DMSO (30 mL) and stir at RT. After 2 h., add the reaction mixture to

EtOAc (150 mL) and 0.5 N HCl (200 mL), and separate the layers. Extract the aqueous layer with EtOAc (50 mL). Combine the organic layers and wash with saturated, aqueous sodium bicarbonate (100 mL) and 1.0 N HCl (100 mL). Dry the organic layer over  $\text{MgSO}_4$ , filter, and concentrate to give the title compound.  $^1\text{H}$  NMR (500 MHz, DMSO)  $\delta$  9.91 (s, 1 H), 8.02 (s, 1 H), 7.69 (s, 2 H), 7.55-7.49 (m, 5 H), 5.86 (s, 2 H); MS (m/e): 400 ( $\text{M}^+ + 1$ ).

#### Preparation 68

1-[1-(3,5-bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazol-4-yl]-3-(2-chloro-phenyl)-prop-2-yn-1-ol

10

Dissolve 1-chloro-2-ethynyl-benzene (22.1 g, 162 mmol) in THF (300 mL) and slowly add methyl magnesium bromide (50 mL, 3.0 M in ether). Stir the solution at RT. for 40 min., then add a solution of 1-(3,5-bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazole-4-carbaldehyde (29.6 g, 82.8 mmol) in THF (160 mL). Stir the resulting solution at RT for 2 h, then pour into cold water (500 mL) and 1N HCl (150 mL) and extract with EtOAc (3 X 200 mL). Combine the organic phases and wash with saturated  $\text{NaHCO}_3$  (200 mL) and brine (200 mL) then dry ( $\text{MgSO}_4$ ), filter, and concentrate. Purify the crude material by triturating with 30% ether/hexanes to give the title compound. MS (ES) 494.0 ( $\text{M}+1$ ), MS (ES-) 492.0 ( $\text{M}-1$ );  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  7.87 (s, 1H), 7.79 (s, 2H), 7.47 (dd, 1H,  $J = 1.9, 7.3$  Hz), 7.37 (dd, 1H,  $J = 1.4, 7.9$  Hz), 7.25 (dt, 1H,  $J = 2.0, 7.3$  Hz), 7.19 (dt, 1H,  $J = 1.5, 7.3$  Hz), 5.92 (d, 1H,  $J = 6.7$  Hz), 5.62 (s, 2H), 2.79 (d, 1H,  $J = 6.4$  Hz).

General Preparation E

Under  $N_2$ , charge an oven-dried flask with oxalyl chloride (2 M in  $CH_2Cl_2$ , 1.2 eq) and chill in a dry ice/acetone slush. Add DMSO (3 eq) slowly by syringe and stir 45 min. Add the alcohol of interest (1 eq) in anhydrous  $CH_2Cl_2$  (0.4 M) slowly by syringe and stir 1 h. Then add TEA (5 eq) slowly by syringe and stir for 90 min. while the bath is allowed to warm to RT. Quench the reaction with saturated aqueous  $NH_4Cl$  and  $H_2O$ , extract with ether, wash combined organics with brine, dry over  $MgSO_4$ , filter, and concentrate under vacuum. Purify by chromatography on silica gel.

By the method of General Preparation E, using the appropriate starting materials, the following compounds may be prepared and isolated.

Preparation 88

1-[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-4-methyl-4-trimethylsilanyloxy-pent-2-yn-1-one

5

Dissolve 3-methyl-3-trimethylsilyloxy-1-butyne (1.17 g, 7.5 mmol, 3 eq) in THF (7 mL) and cool to 0 °C. Add ethylmagnesium bromide (2.3 mL of a 3.0 M solution in ether, 7.5 mmol, 3 eq) dropwise and stir at 0 °C for 30 min. Add 1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazole-4-carbaldehyde (1.0 g, 2.5 mmol) as a solution in THF (7 mL). Stir at 0 °C for 1 h, then warm to RT. After 3 h, quench by adding saturated  $\text{NH}_4\text{Cl}$  (25 mL). Extract with EtOAc (2 x 25 mL), wash the combined organic layers with brine (25 mL), dry ( $\text{MgSO}_4$ ), filter, and concentrate.

10

Redissolve the crude alcohol in  $\text{CH}_2\text{Cl}_2$  (12.5 mL) and add activated manganese oxide (1.09 g, 12.5 mmol, 5 eq.). Sonicate the mixture for 2 min, then stir at RT for 24 h. Filter the mixture through a plug of Celite ® and concentrate the filtrate. Purify the residue by chromatography (silica gel, hexanes/EtOAc 3:1 to 1:1 gradient) to provide 605 mg (44%) of the desired alkynyl ketone. TLC:  $R_f$  = 0.51 (1:2 hexanes/EtOAc); MS(ES): 555.1 (M+1), 465.1 (M-OSiMe<sub>3</sub>).

#### Preparation 112

5 (1,1-dimethyl-2-nitro-ethoxy)-trimethyl-silane

To a solution of nitromethane (100 g, 1.64 mmol) and acetone (5 mL), add a catalytic amount of tetramethylguanidine. Using a syringe pump, add acetone (115 mL, 1.64 mmol) over a period of 72 h. to the stirred solution at RT. In a separate flask, combine chlorotrimethylsilane (206 mL, 1.64 mmol) and imidazole (123 g, 1.8 mmol) at 10 0 °C. Transfer the nitromethane/acetone solution into the trimethylsilyl-imidazole mixture and allow the resulting mixture to stir 18 h at RT. Then cool the reaction to 0 °C, dilute with cold ether (450 mL) and wash with cold 1N HCl (200 mL x 2). Wash the organic layer with brine (300 mL). Carefully concentrate the crude material *in vacuo* without heating. Purify by distillation to provide the title compound. <sup>1</sup>H NMR (300 15 MHz, CDCl<sub>3</sub>) δ 4.20 (s, 2H), 1.28 (s, 6H), 0.01 (s, 9H).

#### Preparation 113

1-Iodo-2-methoxy-ethane

20

Add sodium iodide (70.5 g, 0.47 mol) to a solution of 1-bromo-2-methoxy-ethane (47.0 g, 0.34 mol) in acetone and warm to reflux. After 50 h, pour the reaction mixture into ice water and extract with ether. Wash the organic layer with saturated sodium thiosulfate solution (3x), then water and brine. Dry over Na<sub>2</sub>SO<sub>4</sub>, filter, and concentrate

### General Preparation G

5

Combine the alkyl halide of interest (1 eq) and  $\text{AgNO}_2$  (1.1 eq) in ether, cover flask with aluminum foil and heat to reflux. Add additional  $\text{AgNO}_2$  (0.3 eq) if necessary until complete by TLC. Then cool to RT and filter the mixture through Celite®. Dry the filtrate over  $\text{MgSO}_4$ , filter, and concentrate. Purify by vacuum distillation or by flash chromatography on silica gel.

General Preparation H

Slowly add the appropriate halo-pyridine substrate (1 eq) to a cooled (-60 to -70 °C) solution of LDA (1.2 eq) in THF and stir for 1-3 h. Then add DMF (1.7 eq) dropwise and stir the cold mixture for 1-2 h. Allow the mixture to warm to RT, quench with water, and extract with EtOAc. Dry the combined extracts over Na<sub>2</sub>SO<sub>4</sub> and concentrate. Purify by chromatography on silica gel.

Using the method of General Preparation H, the following compounds may be prepared and isolated.

Prep. #	Product	Physical Data
145	3-chloropyridine-4-carboxaldehyde	MS (ES) 142.1 (M+1)
146	4-chloropyridine-3-carboxaldehyde	MS (ES) 142.0, 144.0 (M+1)

General Preparation I

Combine the appropriate aldehyde (1 eq) with hydroxylamine hydrochloride (1.1 eq) in a mixture of EtOH, water, and ice. Slowly add 1N NaOH (2.5 eq) and stir the mixture 2-4 h at RT. Adjust to pH 7 and extract with Et<sub>2</sub>O or EtOAc. Dry the combined extracts over Na<sub>2</sub>SO<sub>4</sub>, concentrate, and dry the resulting solid. Use without further purification.

Using the above method, the following compounds may be prepared.

General Preparation J

Combine the appropriate oxime (1 eq) with N-chlorosuccinimide (1-1.2 eq) in DMF and stir at RT until reaction is complete. Then pour the reaction mixture into ice water and extract with Et<sub>2</sub>O or EtOAc. Wash the combined extracts with water and dry over Na<sub>2</sub>SO<sub>4</sub>. Concentrate and dry the resulting solid under reduced pressure. Use without further purification.

Using the method of General Preparation J, the following compounds may be prepared and isolated.

General Preparation K

Combine the appropriate chloro-oxime (1.0 eq) and the alkyne of interest (1.0 eq) in EtOAc or Et<sub>2</sub>O (0.5 M). Add triethylamine (2.5 eq) and stir the mixture at RT for 4-18 h. (The mixture may be heated to 50 °C to facilitate the reaction if desired.) When the reaction is complete, treat the mixture with saturated sodium bicarbonate solution, and extract with ether (2 times). Dry the combined organic layers over MgSO<sub>4</sub>, then filter and concentrate *in vacuo*. Purify the residue by flash chromatography on silica gel to give the title compound.

By the above method, the following compounds may be prepared and isolated.

### General Preparation M

Heat a mixture of the appropriate heteroaryl bromide (1.0 eq), ethynyl-trimethylsilane (2.0 eq),  $\text{PdCl}_2(\text{PPh}_3)_2$  (0.1 eq),  $\text{CuI}$  (0.2 eq) and diisopropyl ethyl amine (10 eq) in DMF at 70 °C. After 18 h., dilute with methylene chloride, and wash with water. Dry over  $\text{MgSO}_4$ , filter and concentrate *in vacuo*. Purify the residue by flash chromatography on silica gel to give the desired compound.

By the method of General Preparation M, using the appropriate starting materials, the following compound may be prepared and isolated.

Prep. #	Product	Physical Data
188	4-trimethylsilanylethynyl-pyridine	MS (ES) 176.0 ( $\text{M} + 1$ ); TLC $R_f = 0.1$ (20% ether in hexanes).

### Preparation 190

#### 5-trimethylsilanylethynyl-pyrimidine

Dissolve 5-bromopyrimidine (50.0 g, 314.4 mmol) in triethylamine (400 mL), add copper (I) iodide (1.20 g, 6.2 mmol) and stir mixture under nitrogen. After 15 min., add trimethylsilyl acetylene (53.3 mL, 377.3 mmol), followed by dichlorobis(triphenylphosphine) palladium (II) (8.82 g, 12.5 mmol) and stir at RT. After 3 h, filter the solution through Celite<sup>®</sup>, rinsing with ether. Concentrate the filtrate under reduced pressure. Purification by flash chromatography on silica gel eluting first with hexanes (100%), then with hexanes:EtOAc (3:1) gives the title compound:  $^1\text{H}$  NMR (300 MHz,  $\text{CDCl}_3$ )  $\delta$  9.10 (s, 1H), 8.77 (s, 2H), 0.27 (s, 9H).

Preparation 191

## 4-ethynyl-pyridine

Add  $K_2CO_3$  (3.32 g, 24.0 mmol) to a solution of 4-trimethylsilanylethynyl-pyridine (3.51 g, 20.0 mmol) in MeOH (40 mL). After 10 min., add sat. aq.  $NH_4Cl$  solution (approx. 10 mL) and stir. After 10 min., add  $MgSO_4$ , filter and concentrate at RT. Purify by Kugelrohr distillation (50-55°C) to afford the title compound (1.31 g, 64%). MS(ES) 104 (M+1).  $^1H$  NMR (400 MHz,  $CDCl_3$ )  $\delta$  3.29 (s, 1H); 7.34 (d, 2H,  $J$  = 5.9 Hz); 8.59 (d, 2H,  $J$  = 5.9 Hz).

10

Preparation 192

## 4-methyl-4-trimethylsilanyloxy-pent-2-ynal

Dissolve 3-methyl-3-trimethylsilyloxy-1-butyne (8.35 g, 53.4 mmol) in THF (200 mL) and cool to -40 °C. Add n-butyllithium (26.7 mL of a 2.0 M solution in cyclohexane, 53.4 mmol, 1 eq.) dropwise over a 5 minute period. Stir for 10 min., then add dry DMF (8.27 mL, 7.81 g, 107 mmol, 2 eq.) in one portion. After 30 min., pour into a cooled (0 °C), vigorously stirred mixture of 10%  $KH_2PO_4$  (290 mL, 213 mmol) and ether (300 mL). Separate the layers and wash the organic layer with water (2 x 200 mL). Dry ( $MgSO_4$ ), filter, and concentrate to give 9.4 g (94% crude) of a light oil. Use without further purification. TLC:  $R_f$  = 0.40 (20:1 hexanes/EtOAc);  $^1H$  NMR ( $CDCl_3$ , 300 MHz)  $\delta$  9.03 (s, 1H), 1.35 (s, 6H), 0.02 (s, 9H).

20

General Preparation N

25

Dissolve the alkyne (1.0 eq) in ether (0.25 M) and add triethylamine (2.4 eq.). Add 2-chloro-N-hydroxybenzenecarboximidoyl chloride (1.2 eq.) as a solution in ether (1 M) dropwise via an addition funnel over a period of 2 h. After 24 h, dilute with ether and wash with water (2 x) and brine. Dry ( $MgSO_4$ ), filter, and concentrate to give a yellow oil. Purify by crystallization from hexanes, or by chromatography (silica gel, hexanes/EtOAc gradient).

10 1-[5-(2-chloro-phenyl)-3-(tetrahydro-pyran-2-yloxymethyl)-isoxazol-4-yl]-3-pyridin-4-yl-propynone

Add 2.5 M butyllithium (18.8 mL, 47 mmol) to a -10 °C solution of 4-ethynyl pyridine (4.2 g, 40.7 mmol) in THF (100 mL). Stir this solution for 15 min. and then add 15 5-(2-chloro-phenyl)-3-(tetrahydro-pyran-2-yloxymethyl)-isoxazole-4-carboxylic acid methoxy-methyl-amide (5.0 g, 13.1 mmol) in THF (100 mL). Stir the reaction at RT 15 h and then quench with water (100 mL) and extract with EtOAc (2 x 150 mL). Wash the organics with brine (150 mL), dry ( $\text{Na}_2\text{SO}_4$ ), filter and concentrate under reduced pressure. Purification by flash chromatography (silica gel, 7:3 to 1:1 hexanes/EtOAc) 20 gives the title compound (4.5 g, 81%). MS (m/e): 423 ( $\text{M} + \text{H}$ )<sup>+</sup>; <sup>1</sup>H NMR (300 MHz,  $\text{CDCl}_3$ )  $\delta$  8.56 (d,  $J$  = 5.8 Hz, 2H), 7.41-7.59 (m, 4H), 6.91 (d,  $J$  = 5.8 Hz, 2H), 5.15 (d,  $J$  = 14 Hz, 1H), 4.90-4.96 (m, 2H), 3.94-4.01 (m, 1H), 3.51-3.62 (m, 1H), 1.52-1.92 (m, 6H); TLC  $R_f$  = 0.42 (9:1 EtOAc/Hexanes).

Cool THF (200 mL) to -10 °C under nitrogen and add a 2.5 M solution of *n*-butyllithium in hexanes (56 mL, 140 mmol) dropwise, keeping the temperature below 5 °C. Add 5-chloropentyne (6.89 g, 67.2 mmol) at 5 °C and stir for 6 h. Add a solution of 5-(2-chloro-phenyl)-3-(tetrahydro-pyran-2-yloxymethyl)-isoxazole-4-carboxylic acid methoxy-methyl-amide (8.5 g, 22.4 mmol) in THF (100 mL) dropwise to the reaction mixture and stir for 30 min., not allowing the temperature to rise above 10 °C. Quench the reaction mixture with water (100 mL), extract with EtOAc (2 x 200 mL), wash with brine (200 mL), dry over sodium sulfate, filter and concentrate under reduced pressure.

Purification by flash chromatography, eluting with 4:1 hexanes:EtOAc to 7:3 hexanes:EtOAc followed by reverse phase prep HPLC eluting with acetonitrile:water gives the title compound as a colorless oil (3.24 g, 38%): MS (m/e): 386 (M + H<sup>+</sup>); <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.38-7.54 (m, 4H), 4.90-5.13 (m, 3H), 3.91-4.00 (m, 1H),

Preparation 205

1-[3-(2-chloro-phenyl)-5-(1-methyl-1-trimethylsilyloxy-ethyl)-isoxazol-4-yl]-3-pyridin-3-yl-prop-2-yn-1-ol

- 5 Dissolve 3-ethynylpyridine (206 mg, 2.0 mmol, 2 eq.) in THF (3 mL). Cool to 0 °C and add LDA (1.47 mL of a 1.5 M soln. in THF, 2.2 mmol, 2.2 eq.) dropwise. After 30 min., add 3-(2-chloro-phenyl)-5-(1-methyl-1-trimethylsilyloxy-ethyl)-isoxazole-4-carbaldehyde (340 mg, 1.0 mmol) as a solution in THF (2 mL). Warm the mixture to RT. After 45 min., quench with 10% KH<sub>2</sub>PO<sub>4</sub> (10 mL). Extract with EtOAc (2 x 15 mL), and
- 10 wash the combined organic layers with brine (15 mL). Dry (MgSO<sub>4</sub>), filter, and concentrate. Purify by chromatography (silica gel, hexanes/EtOAc 2:1 to 1:1 gradient) to provide 370 mg (84%) alcohol as an oil. TLC: R<sub>f</sub> = 0.33 (2:1 hexanes/EtOAc); MS(ES) 441.2 (M+1)<sup>+</sup>.

- Using a method similar to Preparation 205, with the appropriate starting materials,
- 15 the following compound may be prepared.

General Preparation R

Add the appropriate sodium carboxylate (2 eq.) to a solution of 2-bromo-1-(2-chloro-phenyl)-ethanone (1 eq.) in DMF (0.8M). Stir mixture at RT overnight, then dilute with water and brine and extract with ether. Combine the organic layers and wash with 20% Na<sub>2</sub>SO<sub>3</sub> (50 mL) and brine (50 mL), then dry, filter, and concentrate to give the product.

Alternatively, add sodium hydride (1.6 eq.) to a solution of the appropriate carboxylic acid (1.7 eq.) in DMF (0.5M). Stir mixture at RT for 1 h., then add 2-bromo-1-(2-chloro-phenyl)-ethanone (1eq.). Stir solution at RT overnight. Add water and brine, then extract with ether. Combine the organic layers and wash with water, and brine, then dry, filter and concentrate. Purify the crude material by flash chromatography.

Using one of the above methods and the appropriate starting materials, the following compounds may be prepared and isolated.

Add Mg turnings (1.2 eq.) and a small crystal of iodine to a solution of the appropriate 5-bromo-oxazole (1 eq.) in freshly distilled THF (0.2 M). Stir the mixture at reflux for 1-4 h., then cool to RT. Add via cannula a solution of desired carbaldehyde (0.8 eq.) in THF (0.3 M). Stir the solution at RT for 2-18 h. Dilute solution with water  
 15 and add saturated  $\text{NaHCO}_3$  or 1N HCl, then extract with EtOAc. Combine the organic layers and wash with aqueous saturated  $\text{NaHCO}_3$  and brine, then dry, filter, and concentrate. Purify the crude material by flash chromatography.

Alternatively, add *t*-BuLi (2 eq.) to a  $-78^\circ\text{C}$  solution of the appropriate 5-bromo-oxazole (1 eq.) in THF (0.9 M). Stir solution at  $-78^\circ\text{C}$  for 15 min., then add via cannula  
 20 a solution of desired carbaldehyde (0.9 eq.) in THF (0.2 M). Stir the solution at  $-78^\circ\text{C}$  for 30 min., then at RT for 60 h. Dilute the solution with EtOAc and wash with  $\text{NaHCO}_3$  and brine, then dry, filter, and concentrate the organic phase. Purify the crude material by flash chromatography.

Using one of the methods described above, the following compounds may be  
 25 prepared and isolated.

5

To sodium hydride (188 mg of a 60% solution in mineral oil, 113 mg clean, 4.70 mmol) in 14 mL of benzene and 2.5 mL of tetrahydrofuran, add (2-oxo-propyl)-phosphonic acid dimethyl ester (743 mg, 618 μL, 4.48 mmol) as a solution in 5 mL of benzene at 0 °C dropwise. The mix remains white and produces some gas. After 1 h at 0 °C, add tosyl azide (940 mg, 4.70 mmol) as a solution in 2.5 mL of benzene and warm the mixture to RT. After 2.3 hours, pour the mix through a plug of Celite® rinsing with tetrahydrofuran, benzene, and ether. Concentrate the filtrate and purify the residue by chromatography (Hexanes/EtOAc gradient) to provide 794 mg of (1-Diazo-2-oxo-propyl)-phosphonic acid dimethyl ester as a yellow solid. This material may be used directly. Exact Mass 192.03: mass spectrum (aspc): m/z = 165.0 (M+1 (-N<sub>2</sub>)).

15

To the (1-Diazo-2-oxo-propyl)-phosphonic acid dimethyl ester (794 mg, 4.20 mmol) in 70 mL of methanol, add 1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazole-4-carbaldehyde (1.44 g, 3.60 mmol) as a solution in 5 mL of methanol. To

this mix, add (995 mg, 7.20 mmol) of potassium carbonate and mix the solution for 18 h. Dilute with ether and saturated  $\text{NaHCO}_3$ , and extract with ether 3 times, wash the organics again with saturated  $\text{NaHCO}_3$ , and dry the combined organics with  $\text{MgSO}_4$ . Filter and concentrate. Purify by chromatography (silica gel, hexanes/ $\text{EtOAc}$  gradient) to provide 764 mg of the title compound. Exact Mass 395.09 spectrum (aspci):  $m/z = 396.1$  ( $M+1$ ), 394.0 ( $M-1$ );  $^1\text{H}$  NMR (250 MHz,  $\text{CDCl}_3$ )  $\delta$  7.73 (s, 1H), 7.55-7.40 (m, 4H), 7.42-7.30 (m, 3H), 5.52 (s, 2H), 3.21 (s, H).

By a method analogous to Preparation 230, the following compounds may be prepared and isolated.

#### General Preparation V

Dissolve the appropriate alkyne (9.76mmol) in THF (50mL) and cool to  $-78^\circ\text{C}$ . Add a solution of  $\text{MeMgBr}$  (3eq, 3.0M in ether) and stir at  $-78^\circ\text{C}$  for 1.5 hours, then add 2-chlorobenzaldehyde (3eq). Stir solution at  $-78^\circ\text{C}$  for 1 hour, then at RT for 2 hours. Dilute the solution with ether (100mL) and wash with 1N  $\text{HCl}$  (30mL), saturated  $\text{NaHCO}_3$  (50mL), and brine (50mL). Dry, filter, and concentrate the organic phase then purify the crude material by flash chromatography (silica gel, hexanes/ $\text{EtOAc}$  gradient) to give the title compound.

By a method similar to General Preparation V, the following compounds may be prepared and isolated.

General Preparation W

Under N<sub>2</sub>, charge an oven-dried flask with oxalyl chloride (2M in CH<sub>2</sub>Cl<sub>2</sub>, 1.2 eq) and chill in a dry ice/acetone slush. Add DMSO (3 eq) slowly by syringe and stir 45 minutes. Add the alcohol of interest (1 eq) in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (0.4 M) slowly by syringe and stir 1 hour. Add TEA (5 eq) slowly by syringe and stir 90 minutes while warming to room temp. Quench with saturated aqueous NH<sub>4</sub>Cl and H<sub>2</sub>O, extract with ether, wash combined organics with brine, dry over MgSO<sub>4</sub>, filter and concentrate under vacuum. Purify by flash chromatography (silica gel, EtOAc/Hexane gradient) to give the title compound.

General Preparation X

Combine the alkyne of interest (1 eq) in benzene or toluene (0.1 M), with the appropriate nitro compound (1.5 eq), 1,4-phenylene diisocyanate (3 eq) and TEA (10 drops/ mmol A). Attach a reflux condensor and heat to reflux. After 20 hours, add additional nitro compound (0.5 eq), 1,4-phenylene diisocyanate (1 eq) and TEA, stir 6 hours. Remove from heat, add H<sub>2</sub>O and stir 20 min. Filter through Celite®, remove H<sub>2</sub>O, dry over MgSO<sub>4</sub>, filter and concentrate under vacuum. Purify by chromatography on silica gel to give the title compound.

By a method similar to General Preparation X, the following compounds may be prepared and isolated.

Preparation 2505-Amino-1-(3,5-bis-trifluoromethyl-benzyl)-1*H*-imidazole-4-carboxylic acid amide

- 5 Wash sodium hydride (2.71 g of a 60% solution in mineral oil, 67.66 mmol) three times with hexanes, then dilute with 85 mL of DMF. To this mixture add the HCl salt of 5-amino-1*H*-imidazole-4-carboxylic acid amide (5.0 g, 30.75 mmol) neat in four portions. The mixture generates gas and remains cloudy and turns a slightly green color. After mixing for 40 min., add 1-chloromethyl-3,5-bis-trifluoromethyl-benzene (8.88 g, 33.83
- 10 mmol). (The mixture again generates gas and darkens). Stir at RT for 2 days, then pour through a plug of Celite and wash with DMF (50 mL) and xylenes (50 mL). Remove the DMF via azeotropic distillation with xylenes under reduced pressure (5 x 50 mL), and then concentrate the residue under a steady stream of nitrogen for 18 h to provide the title compound as a dark purple solid. Preparation 255

1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1*H*-imidazole-4-carboxylic acid  
methoxy-*N*-methyl-amide

Combine 1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1*H*-imidazole-4-  
5 carboxylic acid methyl ester (0.46 g, 1.1 mmol) and *N,O*-dimethyl-hydroxylamine-HCl  
(0.16 g, 1.6 mmol) in THF (5.5 mL). Chill to 0 °C, then slowly add isopropyl magnesium  
chloride (2M/THF, 1.6 mL, 3.2 mmol). After 45 min., warm to RT. Add 70% sat. aq.  
NH<sub>4</sub>Cl, and extract with EtOAc. Dry over MgSO<sub>4</sub>, filter, and concentrate. Purify by flash  
chromatography on silica gel to give the title compound: MS (ES) 459.2 (M+1); <sup>1</sup>H NMR

Preparation 257

[1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-imidazol-4-yl]-[5-(2-chloro-phenyl)-3-(tetrahydro-pyran-2-yloxy-methyl)-isoxazol-4-yl]-methanone

To a solution of 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-imidazol-4-yl]-3-(2-chloro-phenyl)-propynone (0.257 g, 0.48 mmol) in benzene (6 mL) add 2-(2-nitroethoxy) tetrahydropyran (0.15 mL, 0.72 mmol), 1,4-phenylene diisocyanate (0.23 g, 1.44 mmol), and TEA (9 drops) with stirring. Attach a reflux condenser and set in a 100 °C oil bath. After 30 h., remove from heat, add H<sub>2</sub>O (5 mL), and stir 20 min. Filter the mixture through celite, wash with sat. aq. NaHCO<sub>3</sub>, dry over MgSO<sub>4</sub>, filter and concentrate under vacuum. Purify the residue by flash chromatography, (EtOAc/Hexane 10%-85% then 7.5% MeOH/EtOA) to give the title compound. MS (ES) 691.2 (M+1); TLC R<sub>f</sub> 0.25 (85% EtOAc/Hexane).

Preparation 258

[1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-imidazol-4-yl]-[5-(2-chloro-phenyl)-3-[1,3]dioxolan-2-ylmethyl-isoxazol-4-yl]-methanone

Using a method similar to Preparation 257, the title compound may be prepared and isolated. MS (ES) 663.3 (M+1), TLC R<sub>f</sub> = 0.08 (85% EtOAc/Hexane).

Preparation 259

[4-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-imidazole-4-carbonyl]-5-(2-chloro-phenyl)-isoxazol-3-yl]-acetaldehyde

Dissolve [1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-imidazol-4-yl]-[5-(2-chloro-phenyl)-3-[1,3]dioxolan-2-ylmethyl-isoxazol-4-yl]-methanone (0.23 g, 0.35 mmol) in acetic acid (4 mL) and add H<sub>2</sub>O (2 mL). Attach a reflux condenser and warm to 100 °C. After 18 h., concentrate the solution under reduced pressure, neutralize with sat. aq. NaHCO<sub>3</sub>, and extract with CH<sub>2</sub>Cl<sub>2</sub> and EtOAc (2x). Dry the combined organic layers over MgSO<sub>4</sub>, filter, and concentrate to give the title compound: MS (ES) 619.2 (M+1); TLC R<sub>f</sub> = 0.35 (5% MeOH/EtOAc).

Preparation 260

1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-carboxylic acid methyl ester

Add 3,5-bis trifluoromethyl benzyl amine (5.66 g, 23.30 mmol) to a solution  
5 (E/Z)-3-bromo-2-methyleneamino-3-phenyl-acrylic acid methyl ester (K. Nunami *et al*, *J. Org. Chem.* 1994, 59, 7635.) (5.20 g, 19.4 mmol) and triethylamine (2.7 mL, 19.4 mmol) in DMF (60 mL). Stir the reaction mixture at RT for 16 h, then pour the mixture into saturated aqueous NaHCO<sub>3</sub> and extract with CH<sub>2</sub>Cl<sub>2</sub> (once) and EtOAc (three times). Dry the combined organic layers over MgSO<sub>4</sub>, filter, and concentrate. Remove the excess  
10 DMF via azeotropic distillation at reduced pressure with xylenes. Purify the residue by flash chromatography (hexanes/EtOAc gradient) to yield 3.0 g (36 %) of the title compound as a brown-orange solid. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) 7.83 (s, 2H) 7.79 (s, 1H), 7.75 (s, 1H), 7.35-7.5 (m, 3H), 7.25-7.49 (m, 2H), 5.15 (s, 2H), 3.77 (s, 3H); MS/ES 429.1 (M+1).

Preparation 261

1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-carboxylic acid

Add 5N NaOH (200 mL) to a solution of 1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-carboxylic acid methyl ester (3.0 g, 7.0 mmol) in EtOH (200 mL).  
20 Warm the mixture to 70 °C and stir for 16 h. Then cool to RT and concentrate to 220 mL under reduced pressure. Cool this solution to 0 °C and add conc. HCl to pH 1. Filter the resulting precipitate and dry under vacuum to provide 3.0 g (100%) of the title compound as a light brown solid. <sup>1</sup>H NMR (300MHz, DMSO-*d*<sub>6</sub>) δ 7.95 (s, 1H), 7.85 (s, 1H), 7.19-7.34 (m, 5H), 7.15-7.02 (m, 2H), 5.20 (s, 2H), 3.20 (br s, 1H); MS/ES 415.2 (M+1).

Preparation 262

1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-carboxylic acid methoxy-N-methyl-amide

To a solution of 1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-  
30 carboxylic acid (1.20 g, 2.90 mmol) in DMF (30 mL), add N-methoxy-N-methyl amine

hydrochloride (424.1 mg, 4.35 mmol), EDCI (609.6 mg, 3.19 mmol), TEA (325.1 mg, 0.448 mL, 3.19 mmol), DMAP (11 mg, 0.087 mmol), and HOAT (433.6, 3.19 mmol). Stir the mixture at RT for 20 h., then pour into a solution of CH<sub>2</sub>Cl<sub>2</sub> (100 ml) and brine (60 mL). Separate the layers and extract the aqueous layer with CH<sub>2</sub>Cl<sub>2</sub> (5x) and EtOAc (2x). Dry the combined organic layers over MgSO<sub>4</sub>, filter and concentrate to provide the title compound that may be used without further purification. MS/ES 458.0 (M+1), 456.0 (M-1).

#### Preparation 263

10 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazol-4-yl]-3-(2-chloro-phenyl)-propynone

Add ethyl magnesium bromide (1.26 ml of a 3 molar solution in THF, 3.77 mmol) to a cooled (0 °C) soln. of 2-chlorophenyl acetylene (562 mg, 4.12 mmol) in THF (35 mL). Stir for 1 h., then add 1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-imidazole-4-carboxylic acid methoxy-methyl-amide (627g, 1.371 mmol) as a solution in THF (10 mL). After 1 h., warm to RT and stir for another 8 h. Pour the mix into sat. NH<sub>4</sub>Cl and extract with CH<sub>2</sub>Cl<sub>2</sub> (2x), and EtOAc (2x). Dry over MgSO<sub>4</sub>, filter, and concentrate. Purify by radial chromatography (hexanes/EtOAc gradient) to provide 560 mg of the title compound. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.85 (s, 1H), 7.82 (s, 1H), 7.45-7.15 (m, 11H), 5.21 (s, 2H).

mL) and CH<sub>2</sub>Cl<sub>2</sub> (15 mL). Separate the layers and extract the aqueous layer with CH<sub>2</sub>Cl<sub>2</sub> (3 x 15 mL) and with EtOAc (15 mL). Dry the combined organic layers over MgSO<sub>4</sub>, filter, and concentrate. Purify the residue by chromatography on silica gel (hexanes/EtOAc gradient) to provide 245 mg of the title compound as a yellow liquid.

5 MS 497.14, ES/MS (M+1) 498.3, ES/MS (M-1) 496.8. <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 7.80-7.0 (m, 3H), 7.60-7.18 (m, 5H), 5.51 (s, 2H), 5.35 (m, 1H), 0.02 (s, 9H).

#### Preparation 265

10 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-3-trimethylsilanyl-propynone

To a solution of 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-3-trimethylsilanyl-prop-2-yn-1-ol (20 mg, 0.040 mmol) in CH<sub>2</sub>Cl<sub>2</sub> (2 mL) add oven dried 4 Å mol sieves (40 mg), NaOAc (6.6 mg, 0.080 mmol), and pyridinium  
15 chlorochromate (13 mg, 0.060 mmol). The mixture turns from orange to dark brown. After 2.5 h., dilute the mixture with Et<sub>2</sub>O (6 mL) and stir for 5 min, then pour the mixture through a plug of Celite (1 cm) and silica gel (2 cm). Concentrate the filtrate and purify the residue by chromatography on silica gel (hexanes/EtOAc gradient) to provide 6 mg of the title compound as a faintly yellow liquid. R<sub>f</sub> = 0.6 (50:50 EtOAc / hexanes).

Example 27

[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone

- 5 Combine 1-[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-3-(2-chloro-phenyl)-propynone (0.31 g, 0.58 mmol), 1,4-phenylene diisocyanate (0.48 g, 3.0 mmol), (1,1-dimethyl-2-nitro-ethoxy)-trimethyl-silane (3.0 g, 1.5 mmol), triethylamine (8 drops) and benzene (10 mL), stir, and heat at reflux. After 18 h., cool to ambient temperature, filter the brown precipitate, wash with ethyl acetate, and
- 10 concentrate. Purify the resulting mixture by silica gel chromatography eluting with 1:1 EtOAc/hexanes to give [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-(1-methyl-1-trimethylsilyloxy-ethyl)-isoxazol-4-yl]-methanone (0.20 g, 0.28 mmole).

- 15 Dissolve the residue in THF (5 mL) and add TBAF (0.31 mL of a 1M soln., 0.31 mmole). Stir for 30 min., then evaporate the solvent and purify the product by flash chromatography, eluting with 2:1 EtOAc/hexane to give the title compound (35 mg, 23 %). <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>) δ 1.55 (s, 6H), 5.40 (s, 2H), 7.15 (d, *J* = 7.81 Hz, 1H), 7.19 (m, 2H), 7.31 (t, *J* = 7.81 Hz, 1H), 7.36 (s, 2H), 7.41 (t, *J* = 7.66, Hz, 1H), 7.70 (m, 1H), 7.87 (s, 1H), 8.82 (m, 2H); MS (ESI) *m/z* 636.0(M+1).

#### Example 71

[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyrazin-2-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-hydroxymethyl-isoxazol-4-yl]-methanone

10

Dissolve [1-(3,5-Bis-trifluoromethyl-benzyl)-5-pyrazin-2-yl-1H-[1,2,3]triazol-4-yl]-[5-(tert-butyl-dimethyl-silanyloxymethyl)-3-(2-chloro-phenyl)-isoxazol-4-yl]-methanone (0.45 g, 1 eq.) in THF and add tetrabutylammonium fluoride solution (0.74 mL 1.2 eq., 1N in THF). Stir 1.5 h. at RT, then dilute with EtOAc and wash with saturated aqueous NaHCO<sub>3</sub> and brine. Dry over Na<sub>2</sub>SO<sub>4</sub>, filter and concentrate *in vacuo*.

77	phenyl	MS (ES) 635.1 (M+1); R <sub>f</sub> = 0.32 (2:1 Hex/EtOAc)

Example 78

[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone

5

Dissolve 2-chloro-N-hydroxybenzenecarboximidoyl chloride (380 mg, 2.0 mmol, 2 eq.) and 1-[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-4-methyl-4-trimethylsilanyloxy-pent-2-yn-1-one (555 mg, 1.0 mmol) in EtOAc (2.5 mL).

- 10 Add TEA (348  $\mu$ L, 252 mg, 2.5 eq.) dropwise and stir at RT. After 18 h., dilute with EtOAc (10 mL). Wash with saturated NaHCO<sub>3</sub> (10 mL), and brine (5 mL), then dry (MgSO<sub>4</sub>), filter, and concentrate.

Dissolve the crude residue in THF (5 mL) and cool to 0 °C. Add TBAF (Aldrich, 1.2 mL of a 1M soln in THF, 1.2 mmol, 1.2 eq.). After 2 h., dilute with EtOAc (20 mL).

- 15 Wash with water (10 mL) and brine (10 mL). Dry (MgSO<sub>4</sub>), filter, and concentrate. Purify by chromatography (silica gel, hexanes/EtOAc 1:1 to 1:2 gradient) to give the title

-104-

compound as a yellow solid. Recrystallize from hexanes/EtOAc to give 173 mg (26%) of the title compound as a white solid. TLC:  $R_f$  = 0.2 (1:2 hexanes/EtOAc); MS(ES): 636.0 (M+1).

Example 79

- 5 [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone

Using the method of Example 78, the title compound may be prepared and isolated. m.p. = 105 °C; TLC:  $R_f$  = 0.86 (1:2 hexanes/EtOAc); MS(ES) 618.2 [M-OH]<sup>+</sup>.

10

Example 80

- [1-(3,5-bis-trifluoromethyl-benzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone

- 15 To a solution of [1-(3,5-Bis-trifluoromethyl-benzyl)-5-chloro-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-methyl-1-trimethylsilanyloxy-ethyl)-isoxazol-4-yl]-methanone (40 mg, 0.06 mmol) in DMSO (0.5 mL), add imidazole (41 mg, 0.60 mmol) and heat to 80 °C for 12 h. Cool to RT and dilute with EtOAc (3 mL). Wash the solution with 1N HCl (3 ml) and H<sub>2</sub>O (3 mL). Pass organic layer through *Varian ChemElute*®

-105-

drying cartridge and concentrate. Chromatograph crude material using a gradient (10:1 to 1:5 Hex/EtOAc) to afford the title compound (18.2 mg, 49%).  $R_f = 0.53$  (1:5 Hex/EtOAc); MS/ES 625.1 (M+1).

Example 81

[1-(3,5-bis-trifluoromethyl-benzyl)-5-morpholin-4-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-(1-hydroxy-ethyl)-isoxazol-4-yl]-methanone

Dissolve 1-(3,5-bis-trifluoromethyl-benzyl)-5-morpholin-4-yl-1H-[1,2,3]triazol-4-yl]-[5-(1-tert-butoxy-ethyl)-3-(2-chloro-phenyl)-isoxazol-4-yl]-methanone (160 mg, 0.23 mmol) in TFA (1 mL) and stir at RT overnight. Dilute with EtOAc (10 mL) and wash with 1N NaOH (3 x 5 mL), saturated  $\text{NaHCO}_3$  (5 mL), and brine (5 mL). Dry ( $\text{MgSO}_4$ ), filter, and concentrate. Purify the residue by chromatography (silica gel, hexanes/EtOAc 2:1 to 1:1 gradient) to give 126 mg of a white solid. Recrystallize from hexanes/EtOAc to provide 92 mg (63%) of the title compound. m.p. 145-146 °C; TLC:  $R_f = 0.28$  (1:1 hexanes/EtOAc); MS(ES) 629.9 (M+1).

General Example F

Dissolve the appropriate 5-chlorotriazole (1eq.) in the appropriate amine (20-120 eq.) and stir at 80-110 °C. The amine may be in solution in a suitable solvent, such as MeOH, DMSO, or THF. After 2-20 h., dilute the solution with EtOAc (25 mL) and wash with 1N HCl (20 mL), water (20 mL), and saturated  $\text{NaHCO}_3$  (20 mL). Dry, filter, and concentrate the organic phase then purify the residue by flash chromatography on silica gel.

Using a method similar to Example 152, the title compound may be prepared and isolated. MS (ES) 621.0 (M+1); <sup>1</sup>H NMR (300 MHz, CDCl<sub>3</sub>): δ 7.86-7.09 (m, 12H), 5.44 (s, 2H), 4.80 (t, *J* = 5.0 Hz, 2H), 4.16 (m, 2H), 2.56 (t, *J* = 6.0 Hz, 1H).

### General Example H

15

Add Dess-Martin periodinane (1.5 eq.) to a solution of the appropriate alcohol (1 eq.) in dichloromethane (0.05M - 0.5M). Stir at 0 °C for 30 min., then at RT for 1-5 h. Dilute with ether and wash with cold 0.1N NaOH, water, and brine. Dry, filter, and concentrate the organic phase and purify the crude material by flash chromatography to give the title compound.

20

Alternatively, under N<sub>2</sub>, charge an oven-dried flask with oxalyl chloride (2M in CH<sub>2</sub>Cl<sub>2</sub>, 1.2 eq.) and chill in a dry ice/acetone slush. Add DMSO (3 eq.) slowly by syringe and stir 15 min. Add the alcohol of interest (1 eq.) in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (0.4 M) slowly by syringe and stir 1 h. Add TEA (5 eq.) slowly by syringe and stir 2 h. while bath is allowed to expire. Quench with H<sub>2</sub>O, extract with ether, dry over MgSO<sub>4</sub>, filter and concentrate under vacuum to give the title compound.

General Example I

Dissolve the acetal of interest (1 eq.) in acetone/H<sub>2</sub>O (4:1) and add p-toluenesulfonic acid (1 eq). Attach a reflux condensor and heat the mixture overnight at 60 °C. Neutralize with saturated aqueous NaHCO<sub>3</sub>, extract with EtOAc, dry over MgSO<sub>4</sub>, filter, and concentrate under vacuum.

Alternatively, in a pressure vessel, dilute the acetal of interest (1 eq) with acetic acid/H<sub>2</sub>O (2:1, 0.1 M) and heat at 125 °C for 48 h. Concentrate the mixture and dissolve the residue in EtOAc. Wash with saturated aqueous NaHCO<sub>3</sub> and brine, then dry the organic layer over MgSO<sub>4</sub>, filter, and concentrate under vacuum.

Using one of the above methods and the appropriate starting materials, the following compounds may be prepared and isolated.

Example 171

[1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-ethyl)-isoxazol-4-yl]-methanone

5

To a solution of 4-[1-(3,5-bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazole-4-carbonyl]-5-(2-chloro-phenyl)-isoxazole-3-carbaldehyde (75 mg, 0.12 mmol) in THF (0.6 mL) at  $-78^{\circ}\text{C}$  under  $\text{N}_2$ , add methylmagnesium bromide (120  $\mu\text{L}$ , 3.0 M in  $\text{Et}_2\text{O}$ ). Allow the reaction to warm to  $0^{\circ}\text{C}$  and stir for two h., then quench the reaction with a saturated solution of  $\text{NH}_4\text{Cl}$  (1 mL). Dilute the mixture with  $\text{CH}_2\text{Cl}_2$  (1 mL), wash with  $\text{H}_2\text{O}$  (1 mL) and brine (1 mL). Pass the organic layer through a *Varian ChemElute*® drying cartridge and concentrate. Purify the residue by chromatography on silica gel using a gradient of 10:1 Hex/EtOAc to 2:1 Hex/EtOAc to afford the title compound (4.3 mg, 6%). MS/ES (M+1) = 620.9.

Example 210

[1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-2-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone

5

- Dissolve 1-[5-(2-chloro-phenyl)-3-(tetrahydro-pyran-2-yloxymethyl)-isoxazol-4-yl]-3-pyridin-2-yl-propynone (0.27 g, 0.64 mmol) in toluene (10.0 mL), add 1-azidomethyl-3,5-bis-trifluoromethyl-benzene (0.26 g, 0.95 mmol) and heat to 100 °C. After 18 h., concentrate the reaction mixture and purify crude material by flash chromatography using a linear gradient of 15% to 40% EtOAc in hexanes to give [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-2-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-cyclohexyloxymethyl-isoxazol-4-yl]-methanone. Dissolve this material in methanol (15.0 mL), add *p*-toluenesulfonic acid monohydrate (0.09 g, 0.48 mmol) and stir at RT for 3 h.

- Dilute reaction mixture with 1N NaOH and extract with EtOAc. Wash the organic layer with water and brine, then dry, filter, and concentrate. Purify the residue by flash chromatography using a linear gradient of 50% to 70% EtOAc in hexanes to give the title compound (0.11 g, 46%). - Add BuLi (0.80 mL, 1.28 mmol) to a  $-78^{\circ}\text{C}$  solution of 1-(2-chloro-phenyl)-1H-imidazole (200 mg, 1.12 mmol) in THF (3 mL). Stir at  $-78^{\circ}\text{C}$  for 20 min., then add a solution of 1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazole-4-carboxylic acid methoxy-methyl-amide (261 mg, 0.57 mmol) in THF (2 mL) via cannula.
- 5 Stir the resulting solution at  $-78^{\circ}\text{C}$  for 10 min., then allow to warm to RT and stir for 2 h. Add 1N HCl (1.3 mL) and stir for 30 min. Dilute reaction with EtOAc (50 mL) and wash with water (20 mL), saturated  $\text{NaHCO}_3$  (20 mL) and brine (20 mL). Dry, filter and concentrate the organic solution and purify the crude material by silica gel chromatography (20% to 80% EtOAc/hexanes) to give a brown solid. Trituration with
- 10 cold ether gives the title compound as a fine white powder. #### General Example O

- 15 Add Mg turnings (1.2 eq.) and a small crystal of iodine to a solution of 5-bromo-oxazole (1 eq.) in freshly distilled THF (0.2 M). Stir the mixture at reflux for 1.5 h., then cool to RT. Add via cannula a solution of the appropriate methoxy-methyl-amide (0.8 eq.) in THF (0.2 M). Stir the solution at reflux for 30 min., then cool to RT and stir for 1 h. Dilute solution with water, neutralize with 1N HCl, and extract with EtOAc. Combine
- 20 the organic layers and wash with saturated aqueous  $\text{NaHCO}_3$  and brine, then dry, filter, and concentrate. Purify the crude material by flash chromatography.

By the method of General Example O, the following compounds may be prepared and isolated.

The compounds of the present invention can be administered alone or in the form of a pharmaceutical composition, that is, combined with pharmaceutically acceptable carriers, or excipients, the proportion and nature of which are determined by the solubility and chemical properties of the compound selected, the chosen route of administration, and standard pharmaceutical practice. The compounds of the present invention, while effective themselves, may be formulated and administered in the form of their pharmaceutically acceptable salts, for purposes of stability, convenience of crystallization, increased solubility, and the like.

Thus, the present invention provides pharmaceutical compositions comprising a compound of the Formula I and a pharmaceutically acceptable diluent.

The compounds of Formula I can be administered by a variety of routes. In effecting treatment of a patient afflicted with disorders described herein, a compound of Formula I can be administered in any form or mode that makes the compound bioavailable in an effective amount, including oral and parenteral routes. For example, compounds of Formula I can be administered orally, by inhalation, or by the subcutaneous, intramuscular, intravenous, transdermal, intranasal, rectal, ocular, topical, sublingual, buccal, or other routes. Oral administration is generally preferred for treatment of the neurological and psychiatric disorders described herein.

One skilled in the art of preparing formulations can readily select the proper form and mode of administration depending upon the particular characteristics of the compound selected, the disorder or condition to be treated, the stage of the disorder or condition, and other relevant circumstances. (*Remington's Pharmaceutical Sciences*, 18th Edition, Mack Publishing Co. (1990)).

-151-

The pharmaceutical compositions are prepared in a manner well known in the pharmaceutical art. The carrier or excipient may be a solid, semi-solid, or liquid material that can serve as a vehicle or medium for the active ingredient. Suitable carriers or excipients are well known in the art. The pharmaceutical composition may be adapted for oral, inhalation, parenteral, or topical use and may be administered to the patient in the form of tablets, capsules, aerosols, inhalants, suppositories, solutions, suspensions, or the like.

The compounds of the present invention may be administered orally, for example, with an inert diluent or capsules or compressed into tablets. For the purpose of oral therapeutic administration, the compounds may be incorporated with excipients and used in the form of tablets, troches, capsules, elixirs, suspensions, syrups, wafers, chewing gums and the like. These preparations should contain at least 4% of the compound of the present invention, the active ingredient, but may be varied depending upon the particular form and may conveniently be between 4% to about 70% of the weight of the unit. The amount of the compound present in compositions is such that a suitable dosage will be obtained. Preferred compositions and preparations according to the present invention may be determined by a person skilled in the art.

The tablets, pills, capsules, troches, and the like may also contain one or more of the following adjuvants: binders such as povidone, hydroxypropyl cellulose, microcrystalline cellulose, gum tragacanth or gelatin; excipients such as dicalcium phosphate, starch, or lactose; disintegrating agents such as alginic acid, Primogel, corn starch and the like; lubricants such as talc, magnesium stearate or Sterotex; glidants such as colloidal silicon dioxide; and sweetening agents, such as sucrose, aspartame, or saccharin, or a flavoring agent, such as peppermint, methyl salicylate or orange flavoring, may be added. When the dosage unit form is a capsule, it may contain, in addition to materials of the above type, a liquid carrier such as polyethylene glycol or a fatty oil. Other dosage unit forms may contain other various materials that modify the physical form of the dosage unit, for example, coatings. Thus, tablets or pills may be coated with sugar, shellac, or other coating agents. A syrup may contain, in addition to the present compounds, sucrose as a sweetening agent and certain preservatives, dyes and colorings and flavors. Materials used in preparing these various compositions should be pharmaceutically pure and non-toxic in the amounts used.

-152-

For the purpose of parenteral therapeutic administration, the compounds of the present invention may be incorporated into a solution or suspension. These preparations typically contain at least 0.001% of a compound of the invention, but may be varied to be between 0.001 and about 90% of the weight thereof. The amount of the compound of Formula I present in such compositions is such that a suitable dosage will be obtained. The solutions or suspensions may also include one or more of the following adjuvants: sterile diluents, such as water for injection, saline solution, fixed oils, polyethylene glycols, glycerine, propylene glycol or other synthetic solvents; antibacterial agents, such as benzyl alcohol or methyl paraben; antioxidants, such as ascorbic acid or sodium bisulfite; chelating agents, such as ethylene diaminetetraacetic acid; buffers, such as acetates, citrates or phosphates; and agents for the adjustment of tonicity, such as sodium chloride or dextrose. The parenteral preparation can be enclosed in ampoules, disposable syringes or multiple dose vials made of glass or plastic. Preferred compositions and preparations are able to be determined by one skilled in the art.

The compounds of the present invention may also be administered topically, and when done so, the carrier may suitably comprise a solution, ointment, or gel base. The base, for example, may comprise one or more of the following: petrolatum, lanolin, polyethylene glycols, bees wax, mineral oil, diluents such as water and alcohol, and emulsifiers, and stabilizers. Topical formulations may contain a concentration of a compound of Formula I or its pharmaceutical salt from about 0.1 to about 10% w/v (weight per unit volume).

The compounds of Formula I are antagonists of NK-1 receptors. Furthermore, the compounds of Formula I selectively antagonize NK-1 receptors relative to other tachykinin receptors. The antagonist activity of NK-1 receptor antagonists may be determined by the methods below.

#### NK-1 Receptor Binding Assay

The IM-9 cell line is a well-characterized and readily available human cell line. See, e.g., Annals of the New York Academy of Science, 190: 221-234 (1972); Nature (London), 251:443-444 (1974); Proceedings of the National Academy of Sciences (USA), 71:84-88 (1974). These cells are routinely cultured in RPMI 1640 supplemented with 50 µg/ml gentamicin sulfate and 10% fetal calf serum.

-153-

The IM-9 cells are homogenized from cell pellets for crude membranes. The membranes are isolated by homogenizing tissue samples in 30 ml w/v with 50 mM Tris buffer (pH 7.4). After an initial spin at 900 x g, the supernatant is transferred to a clean centrifuge tube and the membranes isolated by centrifugation at 38,000 x g.

5        Approximately 25  $\mu$ g of membranes are incubated with 0.2nM [ $^{125}$ I]-substance P (NEN, Boston, MA) in a receptor binding assay. The assay buffer contains 50 mM Tris, 3 mM MnCl<sub>2</sub>, 0.02% bovine serum albumin, 40  $\mu$ g/ml bacitracin, 2  $\mu$ g/ml chymostatin, 4  $\mu$ g/ml leupeptin and 40  $\mu$ g/ml thiorphan (pH 7.4). Binding studies are conducted in a final volume of 200  $\mu$ l containing various concentrations of test compounds. Non-  
10        specific binding is determined by incubating some tubes in the presence of 1  $\mu$ M substance P (Peninsula, Belmont, CA).

Binding is terminated 1 hour later by rapid filtration using a TOMTEC 96-well cell harvester (TOMTEC, Orange, CT) through GF/A filters that have been presoaked with 0.3% polyethyleneimine (Sigma, St Louis) for 1 hour. The filters are washed with 5  
15        ml of ice-cold 50 mM Tris buffer (pH 7.4) and placed in a drying oven at 60°C. The dried filters are treated with MeltiLex A melt-on scintillator sheets (Wallac, Gaithersburg, MD), and the radioactivity retained on the filters counted using the Wallac 1205 Betaplate scintillation counter. The results are analyzed using a Log-Logit plot from a Microsoft Excel™ workbook and converted to K<sub>i</sub> values with the Cheng-Prusoff equation. Protein  
20        concentrations are measured using Coomassie® protein assay reagent (Pierce, Rockford, IL), with BSA for standards (Bradford, 1976).

Binding studies are carried out to evaluate the ability of compounds of the present invention to inhibit NK-1 receptor activation. Such studies provide *in vitro* data regarding the efficacy of the compounds of the present invention. Representative Examples of the  
25        compounds of Formula (I) were tested in the receptor binding assay described herein and were demonstrated to have binding affinities (K<sub>i</sub> values) of  $\leq$  100 nM.

Several preclinical laboratory animal models have been described for a number of the disorders associated with an excess of tachykinins. One such *in vivo* assay, described  
30        below, may be used to determine whether NK-1 receptor antagonists are CNS-penetrant.

-154-

Gerbil Foot-Tapping

The gerbil foot-tapping assay is well recognized in the art. For example, see Rupniak et al., *Eur. J. Pharmacol.* (1997) 326: 201-209.

Male Gerbils (Mongolian), weighing between 20-40 gm (Harlan Labs, Indianapolis, Indiana) are used for the experiments. Animals are allowed to acclimate prior to any testing.

An NK-1 receptor agonist, such as GR73632 ( $\delta$ -Aminovaleryl [Pro<sup>9</sup>, N-Me-Leu<sup>10</sup>]-Substance P(7-11)) (Peninsula Labs), is dissolved in acidified saline (1ml acetic acid in 1 liter of 0.09% saline) to make a 1 mg/ml solution (corrected for peptide content). The stock solution is further diluted to 10  $\mu$ g/ml in saline (0.9% normal saline), aliquoted and kept frozen until use. The stock solution is further diluted to 3 pmol/5  $\mu$ l in saline for i.c.v. injections.

Test compounds are formulated in appropriate vehicle to a concentration of 1 ml/100 gm body weight. Compounds are dosed by oral gavage (p.o.) or subcutaneously (s.c.) or intraperitoneally (i.p.) at pre-determined times prior to intracerebroventricular (i.c.v.) challenge of agonist. For i.c.v. administration, test compound is co-injected with agonist.

Free hand i.c.v. injection is performed by direct vertical insertion of a cuffed 27-gauge needle with a Hamilton 50  $\mu$ l syringe, to a depth of 4.5 mm below bregma. Light anesthesia with isoflurane may be needed prior to the injection, but is not used routinely.

Following i.c.v. injection of agonist, animals are placed in a plexiglas observation box, and hind foot tapping events are counted for 5 minutes. Data collection is computerized.

Data are analyzed by ANOVA followed by Dunnett's test using JMP statistical program (IBM platform). Data are expressed as number of events/5 minutes.

The results of NK-1 receptor binding studies demonstrate the ability of compounds of the present invention to act as antagonists of NK-1 receptors. It is recognized that the compounds of the present invention would be expected to inhibit the effects of NK-1 receptor activation. Thus, the compounds of the present invention are expected to be useful in the treatment of various disorders associated with excess

-155-

tachykinins, as described to be treated herein, and other disorders that can be treated by such antagonists, as are appreciated by those skilled in the art.

In one embodiment, the present invention provides methods of treating disorders selected from the group consisting of anxiety, depression, psychosis, schizophrenia and  
5 other psychotic disorders, neurodegenerative disorders (including senile dementia of the Alzheimer's type, Alzheimer's disease, AIDS-associated dementia, and Down's syndrome), seizure disorders (including generalized and partial seizures), demyelinating diseases (including multiple sclerosis and amyotrophic lateral sclerosis),  
neuropathological disorders (including peripheral neuropathy, diabetic and chemotherapy-  
10 induced neuropathy, and post-herpetic and other neuralgias), acute and chronic obstructive airway diseases (including adult respiratory distress syndrome, bronchopneumonia, bronchospasm, chronic bronchitis, drivercough, and asthma), inflammatory diseases (including inflammatory bowel disease, psoriasis, fibrositis, osteoarthritis, and rheumatoid arthritis), disorders of the musculo-skeletal system (such as  
15 osteoporosis), allergies (including eczema and rhinitis), hypersensitivity disorders (such as poison ivy), ophthalmic diseases (such as conjunctivitis, vernal conjunctivitis, and the like), cutaneous diseases (including contact dermatitis), atopic dermatitis, urticaria, other eczematoid dermatites, addiction disorders (including alcoholism), stress-related somatic disorders, reflex sympathetic dystrophy (such as shoulder/hand syndrome), dysthymic  
20 disorders, adverse immunological reactions (such as rejection of transplanted tissues), disorders related to immune enhancement or suppression (such as systemic lupus erythematosus), gastrointestinal disorders, diseases associated with the neuronal control of viscera (such as ulcerative colitis, Crohn's disease and irritable bowel syndrome); disorders of bladder function (such as bladder detrusor hyper-reflexia and incontinence),  
25 atherosclerosis, fibrosis and collagen diseases (such as scleroderma and eosinophilic fascioliasis), irritative symptoms of benign prostatic hypertrophy, disorders associated with blood pressure (such as hypertension), disorders of blood flow caused by vasodilation or vasospastic diseases (such as angina, migraine, and Reynaud's disease), emesis (including chemotherapy-induced nausea and acute or delayed emesis), and pain or  
30 nociception (including that attributable to or associated with any of the foregoing conditions), comprising: administering to a patient in need thereof an effective amount of a compound of Formula I or a pharmaceutical composition thereof. That is, the present

-156-

invention provides methods of treating disorders associated with an excess of tachykinins, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I or a pharmaceutical composition thereof.

5 The present invention contemplates the various disorders described to be treated herein and others that can be treated by such antagonists, as appreciated by those skilled in the art.

The disorders associated with an excess of tachykinins are treated by administering an effective amount of a compound or pharmaceutical composition of Formula I. An effective amount can be readily determined by the attending diagnostician, as one skilled in the art, by the use of conventional techniques and by observing results obtained under analogous circumstances. In determining an effective amount, the dose of a compound of Formula I, a number of factors are considered by the attending diagnostician, including, but not limited to: the compound of Formula I to be administered; the species of mammal – its size, age, and general health; the specific disorder involved; the degree of involvement or the severity of the disorder; the response of the individual patient; the mode of administration; the bioavailability characteristics of the preparation administered; the dose regimen selected; the use of other concomitant medication; and other relevant circumstances.

20 An effective amount of a compound of Formula I is expected to vary from about 0.001 milligram per kilogram of body weight per day (mg/kg/day) to about 100 mg/kg/day. Preferred amounts may be readily determined by one skilled in the art.

Of the disorders associated with an excess of tachykinins that are treated according to the present invention, the treatment of depression, anxiety, inflammatory bowel disease, irritable bowel syndrome, and emesis (chemotherapy-induced nausea and acute or delayed emesis) are particularly preferred.

Thus, in a preferred embodiment, the present invention provides a method for treating a depressive disorder, including major depressive disorder, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I or a pharmaceutical composition thereof.

30 In another preferred embodiment, the present invention provides a method for treating anxiety, including generalized anxiety disorder, panic disorder, and obsessive-

-157-

compulsive disorder, comprising: administering to a patient in need thereof an effective amount of a compound of Formula I or a pharmaceutical composition thereof.

Disorders of the central nervous system, including depressive and anxiety disorders, have been characterized in the Diagnostic and Statistical Manual of Mental Disorders (DSM-IV™) (1994, American Psychiatric Association, Washington, D.C.). The DSM-IV™ provides clear descriptions of diagnostic categories. The skilled artisan will recognize that there are alternative nomenclatures, nosologies, and classification systems for these disorders, and that these systems may evolve with medical scientific progress. For instance, the ICHPPC-2 (International Classification of Health Problems in Primary Care) (3<sup>rd</sup> edition, 1983, Oxford University Press, Oxford) provides an alternative classification system. Thus, the terms "depression," "depressive disorders," "anxiety," and "anxiety disorders" are intended to include like disorders that are described in other diagnostic sources.

According to the fourth edition of the DSM-IV™, major depressive disorders are characterized by one or more major depressive episodes, which consist of a period of at least two weeks of depressed mood or loss of pleasure, in addition to other symptoms. Thus, the skilled artisan will recognize that the present invention is useful for the treatment of either a single episode or recurrent episodes of major depressive disorder.

The skilled artisan will appreciate that other depressive disorders may also be treated by administering an effective amount of a compound of Formula (I). Such other depressive disorders include dysthymic disorder, and depressive disorders not otherwise specified (for example, premenstrual dysphoric disorder, minor depressive disorder, recurrent brief depressive disorder, or postpsychotic depressive disorder of schizophrenia). In addition, the treatment of depression by the compounds of Formula (I) may also include the treatment of mood disorders due to a general medical condition and substance-induced mood disorders.

The DSM-IV™ also provides a diagnostic tool for anxiety and related disorders. These disorders include: panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobia, social phobia or social anxiety disorder, obsessive-compulsive disorder, post-traumatic stress disorder, acute stress disorder, generalized anxiety disorder, anxiety disorder due to a general medical condition, substance-induced anxiety disorder and anxiety disorder not otherwise specified. As used

-158-

herein, the term "anxiety" includes treatment of those anxiety disorders and related disorders described in the DSM-IV.

- 30 4. The compound of any of Claims 1-3 wherein  $D^2$  is nitrogen.  
5. The compound of any of Claims 1-4 wherein  $D^1$  is methylene.  
6. The compound of any of Claims 1-5 wherein  $R^1$  is 3,5-bis-trifluoromethyl-phenyl.  
35

-166-

7. The compound of any of Claims 1-6 wherein  $R^6$  is phenyl, which is substituted with one halo or trifluoromethyl.
8. The compound of Claim 7 wherein  $R^6$  is 2-chloro-phenyl.
9. The compound of any of Claims 1-8 wherein  $R^5$  is imidazolyl or a radical of Formula (ID).
10. The compound of Claim 9 wherein  $R^5$  is imidazolyl.
11. The compound of Claim 9 wherein  $R^5$  is a radical of Formula (ID) in which  $Z^2$  is nitrogen.
12. The compound of any of Claims 1-11 wherein  $R^4$  is a radical of Formula (IA).
13. The compound of Claim 12 wherein  $R^4$  is a radical selected from the group consisting of:

14. The compound of Claim 1 wherein the compound is selected from the group consisting of:
- [1-(3,5-bis-trifluoromethylbenzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chlorophenyl)-3-hydroxymethyl-isoxazol-4-yl]-methanone,
- [1-(3,5-bis-trifluoromethyl-benzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chlorophenyl)-2-cyclopropyl-oxazol-5-yl]-methanone,
- [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chlorophenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone,
- [1-(3,5)-bis-trifluoromethyl-benzyl)-5-pyrimidin-5-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-(1-hydroxy-1-methyl-ethyl)-isoxazol-4-yl]-methanone,
- [1-(3,5-bis-trifluoromethyl-benzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-[5-(2-chloro-phenyl)-3-methyl-isoxazol-4-yl]-methanone,
- [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-2-cyclopropyl-oxazol-5-yl]-methanone,

-167-

- [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-2-cyclopropyl-oxazol-5-yl]-methanone,  
 [1-(3,5-bis-trifluoromethyl-benzyl)-5-morpholin-4-yl-1H-[1,2,3]triazol-4-yl]-[4-(2-chloro-phenyl)-1-methyl-1H-pyrazol-5-yl]-methanone, and  
 5 [1-(3,5-bis-trifluoromethyl-benzyl)-5-pyridin-3-yl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-hydroxymethyl-isoxazol-4-yl]-methanone.

15. A compound selected from the group consisting of:  
 {1-(3,5-Bis-trifluoromethyl-benzyl)-5-[(2-dimethylamino-ethyl)-methyl-amino]-1H-  
 10 [1,2,3]triazol-4-yl}-[3-(2-chloro-phenyl)-5-hydroxymethyl-isoxazol-4-yl]-methanone,  
 [1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-[3-(2-chloro-phenyl)-5-[(2-morpholin-4-yl-ethylamino)-methyl]-isoxazol-4-yl]-methanone,  
 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-3-(2-chloro-phenyl)-propenone,  
 15 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-3-(2-fluoro-phenyl)-propenone,  
 1-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-phenyl-1H-[1,2,3]triazol-4-yl]-3-(2-chlorophenyl)-propan-1-one, and  
 3-[1-(3,5-Bis-trifluoromethyl-benzyl)-5-imidazol-1-yl-1H-[1,2,3]triazol-4-yl]-2-(2-chloro-  
 20 benzoyl)-3-oxo-propionitrile.

16. A pharmaceutical composition comprising a compound of **Claim 1**, or a pharmaceutically acceptable salt thereof, in combination with a pharmaceutically acceptable carrier, excipient, or diluent.

25

17. A method for treating a condition associated with an excess of tachykinins, comprising: administering to a patient in need thereof an effective amount of a compound of **Claim 1**, or a pharmaceutically acceptable salt thereof.

- 30 18. The method of **Claim 17** wherein the condition associated with an excess of tachykinins is selected from the group consisting of depression, anxiety, irritable bowel syndrome, and emesis.

# INTERNATIONAL SEARCH REPORT

International application No.  
PCT/US 03/10682

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: —  
because they relate to subject matter not required to be searched by this Authority, namely:  
see FURTHER INFORMATION sheet PCT/ISA/210
2. ☐ Claims Nos.:  
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.1

Although claims 17 and 18 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
